In probability theory and statistics, a Gaussian process is a stochastic process, such that every finite collection of those random variables has a multivariate normal distribution, i.e. every finite linear combination of them is normally distributed. The distribution of a Gaussian process is the joint distribution of all those random variables, and as

such, it is a distribution over functions with a continuous domain, e.g. time or space. A machine-learning algorithm that involves a Gaussian process

The utilization of the Gaussian random field to model spatially dependent uncertainties is commonly practiced in the context of stochastic analysis. However, due to the possibility of Gaussian random field may have a negative value, the Gaussian random fields are not totally suitable for modelling material properties (e.g. Young's modulus, Poisson's ratio) of engineering structures.

In physics and mathematics, a random field is a random function over an arbitrary domain (usually a multi-dimensional space such as $\mathbb{R}^n$). That is, it is a function $(x) \rightarrow Y(x)$ that takes on a random value at each point $x \in D$ (or some other domain). It is also sometimes thought of as a synonym for a stochastic process with some restriction on its index set. That is, by modern definitions, a random field is a ...
