Watershed Prioritization Using Sediment Yield

The watershed prioritization is thus considered as the ranking of different

areas of a watershed according to their need to soil and water conservation measures. It requires detailed information on watershed sediment yield and a tradeoff among complex driving forces (Sadeghi, 2005). Eventually, prioritizing different areas of a watershed based on the problem severity provides numerous benefits to managers and it is a useful tool for the government when preparing regional development strategies.

The ratio of sediment delivered at a given area in the stream system to the gross erosion is the sediment delivery ratio for that drainage area.
