 commercial application of hydrolysis was
 in the making of soap. The saponification
 reaction occurs when a triglyceride (fat)

Hydrolysis: Definition and Examples (Chemistry)

Hydrolysis of salt refers to the reaction
 of salt with water. It is the reverse of a
 neutralization reaction. In this reaction,
 when salt undergoes reaction with
 water, the constituent acid and base are
 formed as products. In hydrolysis, the
 salt dissociates to form ions, completely
 or partially depending upon the solubility
 product of that salt.

In chemistry, a salt is a chemical compound consisting of an ionic

assembly of cations and anions. Salts are composed of related numbers of cations (positively charged ions) and anions (negatively charged ions) so that the product is electrically neutral (without a net charge). These component ions can be inorganic, such as chloride (Cl^-), or organic, such as acetate (CH_3COO^-).
