Translation and Language *Routledge*

Translation Studies and linguistics have been going through a love-hate relationship since the 1950s. This book assesses both sides of the relationship, tracing the very real contributions that linguists have made to translation studies and at the same time recognizing the limitations of many of their approaches. With good humour and evenhandedness, Fawcett describes detailed taxonomies of translation strategies and deals with traditional problems such as equivalence. Yet he also explains and assesses the more recent contributions of text linguistics, sociolinguistics, pragmatics and psycholinguistics. This work is exceptional in that it presents theories originally produced in Russian, German, French and Spanish as well as English. Its broad coverage and accessible treatment provide essential background reading for students of translation at all levels.

Vvedenie v teoriiu perevoda / Introduction to Translation Theory. Fedorov was the first to argue that translation theorizing should be based on linguistics, due to the fact that language is the common denominator of all translation. In addition, this text offers a concise but thorough comparative overview of thinking on translation in Western Europe and Russia. The detailed annotations and substantial introduction by the leading scholar and award-winning translator Brian James Baer inscribe Fedorov's work in the political and cultural context of the Soviet Union, highlighting the early influence of Russian Formalism on Fedorov's thinking. This volume is a model of scholarly translation that fills a major gap in our understanding of Soviet translation theory, which will compel a rethinking of current histories of the field. Contributing to the important work of internationalizing and generating new histories of translation studies, this volume is key reading for scholars and researchers of the history, theory, and politics of translation studies; comparative literature; and Russian and Slavic studies.

Translation Theories

Strategies and Basic Theoretical Issues *Al Manhal*

It is perhaps axiomatic to say that translation is as old as language, for the different language communities render translation mandatory for their interaction. With translation as an indispensable activity there emerged diverse theories and theoretical reflections to guide it. This diversity stems from the diverse perspectives and approaches to translation with the corollary of a plethora of definitions, types and theories scanned in the first three chapters of Part One. Historically, translation theories began with the Romans, but they have undergone four periods as proposed by George Steiner and surveyed in Chapter Two. Chapter Three furnishes a plethora of ancient and recent theories and models generated from these theories. Chapter Four is devoted to translation/interpreting strategies and their application in English/Arabic translations. Part Two tackles certain basic relevant issues such as translation equivalence, loss and gain, determinacy and indeterminacy, and modalization and lexicalization in Arabic - English translation. It is

sincerely hoped that the students and others specialized or interested in translation will benefit from the present book, the writing of which has actually been motivated by MA students in the postgraduate translation programme at Petra University. To them, I would like to express my profound appreciation

Linguistic Theory and Translation Practice

The Impact of Thematic Shift on Semantic and Functional Aspects of the Translated Text

With respect to translation, a detailed discussion regarding the relationship between a particular choice of Theme and the intended meaning of the text covers both Chapter IV and Chapter V of the study. The research also examines how meanings made through the thematic choices in the original texts are interpreted and reproduced by the translator, and the effect of this upon the translations.

Translation and Relevance

Cognition and Context *Routledge*

From the outset, this book has evoked strong responses. Its central claim is that given a comprehensive theory of inferential communication, there is no need for a special theory of translation. This has been praised by some as "wise and right" (Dell Hymes) and condemned by others as "astonishing, not to say

perverse" (Kirsten Malmkjaer). Gutt's call to move from semiotics to an inferential paradigm of communication remains a challenge for many. The debate continues and so does the demand for the book, resulting in this second edition. There is a 'Postscript' entitled 'A decade later', where the author addresses peer criticism, especially from those involved in the movement of 'translation studies', and attempts to bring out more clearly the unique mandate of translation. New perspectives, such as authenticity, are also introduced. Marginal notes, some tongue-in-cheek, liven up the discussion and new references ensure its currency.

Translation

An Advanced Resource Book *Psychology Press*

Provides support for advanced study of translation. Examines the theory and practice of translation from many angles, drawing on a wide range of languages and exploring a variety of sources. Concludes with readings from key figures.

In Other Words

A Coursebook on Translation *Routledge*

In Other Words is the definitive coursebook for anyone studying translation. Assuming no knowledge of foreign languages, it offers both a practical and theoretical guide to translation studies, and provides an important foundation for training professional translators. Drawing on modern linguistic theory, this best-selling text provides a solid base to inform and guide the many key decisions trainee translators have to make. Each chapter offers an explanation of key

concepts, identifies potential sources of translation difficulties related to those concepts, and illustrates various strategies for resolving these difficulties. Authentic examples of translated texts from a wide variety of languages are examined, and practical exercises and further reading are included at the end of each chapter. The second edition has been fully revised to reflect recent developments in the field and new features include: A new chapter that addresses issues of ethics and ideology, in response to increased pressures on translators and interpreters to demonstrate accountability and awareness of the social impact of their decisions. Examples and exercises from new genres such as audiovisual translation, scientific translation, oral interpreting, website translation, and news/media translation. New project-driven exercises designed to support MA dissertation work. Updated references and further reading. A companion website featuring further examples and tasks. Written by Mona Baker, a leading international figure in the field, this key text is the essential coursebook for any student of translation studies.

The Possibility of Language

A Discussion of the Nature of Language, with Implications for Human and Machine Translation *John Benjamins Publishing*

This book is about the limits of machine translation. It is widely recognized that machine translation systems do much better on domain-specific controlled-language texts (domain texts for short) than on dynamic general-language texts (general texts for short). The authors explore this general domain distinction and come to some uncommon

conclusions about the nature of language. Domain language is claimed to be made possible by general language, while general language is claimed to be made possible by the ethical dimensions of relationships. Domain language is unharmed by the constraints of objectivism, while general language is suffocated by those constraints. Along the way to these conclusions, visits are made to Descartes and Saussure, to Chomsky and Lakoff, to Wittgenstein and Levinas. From these conclusions, consequences are drawn for machine translation and translator tools, for linguistic theory and translation theory. The title of the book does not question whether language is possible; it asks, with wonder and awe, why communication through language is possible.

Cognitive Linguistics and Translation

Advances in Some Theoretical Models and Applications *Walter de Gruyter*

The papers compiled in the present volume aim at investigating the many fruitful manners in which cognitive linguistics can expand further on cognitive translation studies. Some papers (e.g. Halverson, Muñoz-Martín, Martín de León) take a theoretical stand, since the epistemological and ontological bases of both areas (cognitive linguistics and translation studies) should be known before specific contributions of cognitive linguistic to translation are tackled. Several works in the volume attempt to illustrate how some of the notions imported from cognitive linguistics may contribute to enrich our understanding of the translation process in a general

translation problem such as metaphor (e.g. Samaniego), the relationship between form and meaning (e.g. Tabakowska, Rojo and Valenzuela) or cultural aspects (e.g. Bernárdez, Sharifian/Jamarani). Others use translation as an empirical field to test some of the basic assumptions of cognitive linguistics such as frames (e.g. Boas), metonymy (e.g. Brdar/Brdar-Szabó), and lexicalisation patterns (e.g. Ibarretxe-Antuñano/Filipovi?). Finally, another set of papers (e.g. Feist, Hatzidaki) opens up new lines of investigation for experimental research, a very promising area still underdeveloped.

Theories of Translation

An Anthology of Essays from Dryden to Derrida *University of Chicago Press*

Spanning the centuries, from the seventeenth to the twentieth, and ranging across cultures, from England to Mexico, this collection gathers together important statements on the function and feasibility of literary translation. The essays provide an overview of the historical evolution in thinking about translation and offer strong individual opinions by prominent contemporary theorists. Most of the twenty-one pieces appear in translation, some here in English for the first time and many difficult to find elsewhere. Selections include writings by Scheiermacher, Nietzsche, Ortega, Benjamin, Pound, Jakobson, Paz, Riffaterre, Derrida, and others. A fine companion to *The Craft of Translation*, this volume will be a valuable resource for all those who translate, those who teach translation

theory and practice, and those interested in questions of language philosophy and literary theory.

Translation Studies

An Integrated Approach *John Benjamins Publishing*

"Translation Studies" presents an integrated concept based on the theory and practice of translation. The author adapts linguistic approaches and methods in such a way that they may be usefully employed in the theory, practice, and analysis of literary translation. The author develops a more cultural approach through text analysis and cross-cultural communication studies. The book is a contribution to the development of translation studies as a discipline in its own right.

A (Bio)Semiotic Theory of Translation

The Emergence of Social-Cultural Reality *Routledge*

This volume outlines a theory of translation, set within the framework of Peircean semiotics, which challenges the linguistic bias in translation studies by proposing a semiotic theory that accounts for all instances of translation, not only interlinguistic translation. In particular, the volume explores cases of translation which does not include language at all. The book begins by examining different conceptualizations of translation to highlight how linguistic bias in translation studies and semiotics has informed these fields and their development. The volume then outlines a complexity theory of translation based

on semiotics which incorporates process philosophy, semiotics, and translation theory. It posits that translation is the complex systemic process underlying semiosis, the result of which produces semiotic forms. The book concludes by looking at the implications of this conceptualization of translation on social-cultural emergence theory through an interdisciplinary lens, integrating perspectives from semiotics, social semiotics, and development studies. Paving the way for scholars to analyze translational aspects of all semiotic phenomena, this volume is essential reading for graduate students and researchers in translation studies, semiotics, multimodal studies, cultural studies, and development studies.

Cognition and Representation in Linguistic Theory *John Benjamins Publishing*

The objective of this book is to better acquaint English-speaking linguistics with a corpus of texts hitherto untranslated, containing the cognitive-based research in formal linguistics of one of the most important theoreticians in the field: Antoine Culioli (b. 1924). Culioli's viewpoint is grounded in Emile Benveniste's (1902-1976) revolutionary answer to Saussure's opposition between competence (*langue*) and performance (*parole*) captured in the idea of *énonciation*, in which the relationship between an individual and a language is one of appropriation. The translation has been prepared to provide the reader with as obstacle-free a path as one can clear to a theory that requires, and indeed commands, a very close, attentive reading. As an additional aid to understand Culioli's argument, footnotes throughout the work show similarities and differences with the work

of the cognitive linguist Ronald W. Langacker.

Language and Language Learning

The Theory and Practice of Translation *BRILL*

"The Theory and Practice of Translation," first published in 1982 and a companion work to "Toward a Science of Translating" (Brill, 1964), analyses and describes the set of processes involved in translating. Bible translating, the focus of this work, offers a unique subject for such a study, as it has an exceptionally long history, involves more than 2,000 languages, a vast range of cultures and a broader range of literary structures than any other type of translating. Not only of interest to Biblical scholars, therefore, this work explores issues of textual meanings and the procedures for communicating these meanings into other languages and cultures.

After Babel

Aspects of Language and Translation *New York : Oxford University Press*

When it first appeared in 1975, *After Babel* created a sensation, quickly establishing itself as both a controversial and seminal study of literary theory. In the original edition, Steiner provided readers with the first systematic investigation since the eighteenth century of the phenomenology and processes of translation both inside and between languages. Taking issue with the principal emphasis of modern linguistics, he finds the root of the "Babel problem" in our deep instinct for privacy and territory, noting that every people has in its language a unique body of shared secrecy. With this provocative

thesis he analyzes every aspect of translation from fundamental conditions of interpretation to the most intricate of linguistic constructions. For the long-awaited second edition, Steiner entirely revised the text, added new and expanded notes, and wrote a new preface setting the work in the present context of hermeneutics, poetics, and translation studies. This new edition brings the bibliography up to the present with substantially updated references, including much Russian and Eastern European material. Like the towering figures of Derrida, Lacan, and Foucault, Steiner's work is central to current literary thought. *After Babel*, Third Edition is essential reading for anyone hoping to understand the debates raging in the academy today.

The Explanation of Linguistic Causes

Az-Za?????'s Theory of Grammar. Introduction, translation, commentary *John Benjamins Publishing*

The ultimate aim of every linguistic tradition is to go beyond the purely descriptive level and seek an explanation for linguistic phenomena. Traditions differ, however, with regard to the class of linguistic phenomena they wish to explain and the framework in which they define their explanation. In this volume the English translation is presented of the treatise on linguistic explanation by the 10th-century Arab grammarian az-Zağğāğī, one of the most original thinkers of the Arabic tradition. He worked in a period in which the influence of Greek logic and philosophy made itself felt in almost all Arabo-Islamic disciplines. Some of the problems

he deals with are familiar to modern linguists (e.g., morphological segmentation, categorization of parts of speech), others are comprehensible only within the frame of reference of Arabic linguistics (e.g., the declension of the verb). An extensive commentary on the text analyzes the problems discussed, both within the Arabic tradition and from the point of view of modern linguistics. Apart from the index of names and terms, there is an index of subjects which enables the general reader to consult text and comments on specific key notions.

Language Teaching

Linguistic Theory in Practice *Edinburgh University Press*

How can theories of language development be understood and applied in your language classroom? By presenting a range of linguistic perspectives from formal to functional to cognitive, this book highlights the relevance of second language acquisition research to the language classroom. Following a brief historical survey of the ways in which language has been viewed, Whong clearly discusses the basic tenets of Chomskyan linguistics, before exploring ten generalisations about second language development in terms of their implications for language teaching. Emphasising the formal generative approach, the book explores well-known language teaching methods, looking at the extent to which linguistic theory is relevant to the different approaches. This is the first textbook to provide an explicit discussion of language teaching from the point of view of formal linguistics.

Semantic differences in translation *BoD – Books on Demand*

Although the notion of meaning has always been at the core of translation, the invariance of meaning has, partly due to practical constraints, rarely been challenged in Corpus-based Translation Studies. In answer to this, the aim of this book is to question the invariance of meaning in translated texts: if translation scholars agree on the fact that translated language is different from non-translated language with respect to a number of grammatical and lexical aspects, would it be possible to identify differences between translated and non-translated language on the semantic level too? More specifically, this book tries to formulate an answer to the following three questions: (i) how can semantic differences in translated vs non-translated language be investigated in a corpus-based study?, (ii) are there any differences on the semantic level between translated and non-translated language? and (iii) if there are differences on the semantic level, can we ascribe them to any of the (universal) tendencies of translation? In this book, I establish a way to visually explore semantic similarity on the basis of representations of translated and non-translated semantic fields. A technique for the comparison of semantic fields of

translated and non-translated language called SMM++ (based on Helge Dyvik's Semantic Mirrors method) is developed, yielding statistics-based visualizations of semantic fields. The SMM++ is presented via the case of inchoativity in Dutch (beginnen [to begin]). By comparing the visualizations of the semantic fields on different levels (translated Dutch with French as a source language, with English as a source language and non-translated Dutch) I further explore whether the differences between translated and non-translated fields of inchoativity in Dutch can be linked to any of the well-known universals of translation. The main results of this study are explained on the basis of two cognitively inspired frameworks: Halverson's Gravitational Pull Hypothesis and Paradis' neurolinguistic theory of bilingualism.

The Foundations of Linguistic

Theory (RLE Linguistics B: Grammar)

Selected Writings of Roy Harris *Routledge*

For Roy Harris, the fundamental problem about linguistics is that it has been led astray by the fact that we are capable intellectually of 'decontextualising' our own verbal behaviour. A whole interlocking system of doctrines about forms, meanings and communication has arisen designed to support the idea that one particular kind of decontextualising analysis is a prerequisite for, rather than a retrospective reflection on, that behaviour. Against this, in 13 essays collected here for the first time, Harris argues for a fresh start, which recognises that we create language 'as we go', both as individuals and as communities, just as we create our social structures, forms of artistic expression, moral values, and everything else we call civilisation. If Harris's thought can be put in a nutshell, it is that all utterances (whether written or spoken) have to appear in a context, and that context is an integral part of the utterance. There is no such thing as a contextless utterance.
