In statistical inference,
 we care about using
 sample data to make
 statements about
 “truths” in the larger
 population. To make
 causal inferences in
 the sample, we need to
 account for all possible

modes of performing inference including statistical modeling, data oriented strategies and explicit use of designs and randomization in analyses. Furthermore, there are broad theories (frequentists, Bayesian, likelihood, design based, ...) and numerous complexities (missing data, observed and unobserved confounding, biases) for performing inference.
