Plants In Human Health And

The physical health benefits of indoor plants have been shown as: Reduced blood pressure; Reduced fatigue and headaches by 20-25 percent in one study; Patients in hospital rooms with plants reported decreased post-operative pain; It is worth noting that the effect of plant species and cultivar differences has not been specifically investigated.

Houseplants: to support human health / RHS Gardening

Since people spend 80-90% of their time indoors, the indoor environment is very important for their health. Indoor plants are part of natural indoor environment, but their effect on the indoor environment and on humans has not been quantified. This review provides a comprehensive summary of the role and importance of indoor plants in human health and comfort according to the following four criteria: photosynthesis; transpiration; psychological effects; and purification.

The basic roles of indoor plants in human health and comfort

The strong historic bond between plants and human health began to unwind in 1897, when Friedrich Bayer and Co. introduced synthetic acetyl salicylic acid (aspirin) to the world. Aspirin is a safer synthetic analogue of salicylic acid, an active ingredient of willow bark, and was discovered independently by residents of both the New and Old worlds as a remedy for aches and fevers [2] .

Selenium and human health. The importance of Se to human health has become a focus in recent years. Although Se deficiency is rare in the US, it does occur in several parts of the world, such as China, where concentrations of Se in the soil are low. Se deficiency can lead to heart disease,

hypothyroidism and a weakened immune system . The toxic effects of excess Se have been known for some time but, in the past decade, it has become more evident that Se has many potential health benefits ...

Plants, selenium and human health - ScienceDirect

Studies have also found a connection between indoor plants and mental health, including aiding the healing process for hospital patients. For example, a 2009 study found patients in hospital rooms with plants and flowers had lower blood pressure, higher pain tolerance, lower anxiety and lower fatigue than patients who stayed in rooms without plants. This study supports the therapeutic value of plants.
