Summary. This chapter introduces some of the basic concepts of vibration analysis for multiple degree of freedom (MDoF) discrete parameter systems, since there are many significant differences to single degree of freedom (SDoF) systems. It focuses on setting up the equations of motion, finding natural frequencies and mode shapes for free vibration, considering damping and determining the forced vibration response with various forms of excitation relevant to aircraft loads.

Abstract. This article presents a simple procedure for predicting time-domain vibrational behaviors of a multiple degrees of freedom mechanical system with dry friction. The system equations of motion are discretized by means of the implicit Bozzak–Newmark integration scheme. At each time step, the discontinuous frictional force problem involving both the equality and inequality constraints is successfully reduced to a quadratic mathematical problem or the linear complementary problem with
