The Concept of State | Inside Network Perimeter Security ...

A network perimeter is the secured boundary between the private and locally managed side of a network, often a company's intranet, and the public facing side of a network, often the Internet. A network perimeter includes: Border Routers: Routers serve as the traffic signs of networks. They direct traffic into, out of, and throughout networks.

What is a Network Perimeter? | Barracuda Networks

Best practices in perimeter security include threat recognition, surveillance detection and pattern analysis. Essentially, in perimeter security, security professionals are trying to create a perimeter-based approach to secure systems and ward off threats as they enter a network. However, many areas of today's security industry believe perimeter security to be less than entirely effective on its own.
