Injection Oil Sensor On Maxxforce Engines

This running test for injection control pressure (ICP) is a good test to run since these specs determine the fuel injection operation. This is the DT MaxxForce which requires 870 psi of ICP to run while the maximum can go as high as 4500 psi. These high pressures create problems if there is a leak in the high pressure manifold or anything else related in the system.

With the right fittings from your local hardware store you can test the injection high pressure manifold that can cause diesel performance problems on a MaxxForce DT when it develops an oil leak. As the video shows there is a substantial leak on this manifold. So we could have just removed the manifold and replaced all of the seals but firstly we wanted to confirm that there was a leak at the manifold and eliminate the HPOP high pressure oil pump.
