A solution that has a higher concentration of hydroxide ions than hydrogen ions; a pH between 7 and 14.

basic solution definition - Northwestern University

A solution is a homogeneous mixture of solvent and solute molecules. A solvent is a substance that dissolves another substance by pulling the molecules apart through electrochemical interactions. The solute then diffuses through the

solvent until the concentration is equal in all parts of the solution. A solution can be liquid, solid, or gaseous.

Solution - Definition, Types and Examples | Biology Dictionary

In the theory of linear programming, a basic feasible solution is a solution with a minimal set of non-zero variables. Geometrically, each BFS corresponds to a corner of the polyhedron of feasible solutions. If there exists an optimal solution, then there exists an optimal BFS. Hence, to find an optimal solution, it is sufficient to consider the BFS-s. This fact is used by the simplex algorithm, which essentially travels from some BFS to another until an optimal one is found.

Basic feasible solution - Wikipedia

In a linear Programming Problem, a basic solution is a solution which satisfies all the constraints ($\leq$, $\geq$ and $=$ type constraints i.e., all the inequality and equality constraints). A feasible solution is a solution which satisfies the non negative restrictions (i.e., ≥ 0).

Acidic Solution Definition in Chemistry

So, the basic variables can be defined as the m variables which can take any value other than zero. Moreover, if the variables satisfy the non-negativity condition of the LP model, the basic solution created by them is called the basic feasible solution. The remaining variables are known as the non-basic variables.
