Gas Chromatography Definition, Principles, Procedure And ...

Introduction: Gas chromatography (GC) is an analytical method used for separating and analyzing compounds that can be vaporized into a gaseous state. This method is used to analyze compounds and samples that have low molecular weight and high volatility.

Title: Gas Chromatography

Gas chromatography separates molecules based on their boiling points and their interaction with the stationary phase. Mixtures to be separated are heated past the boiling of their least volatile component. They are then swept across the solid phase by an inert gas, hence the name gas chromatography.

Session 1a: Separation of solutes in a chromatographic column. A two-component mixture has been placed on a chromatographic column packed with a non-polar stationary phase. Three snapshots in time show the progress of the two solutes, A and B, as they are flushed down the column with a polar mobile phase at a constant flow rate. Sketch the solute bands in the fourth snapshot
