A frequency-selective surface is any thin, repetitive surface designed to reflect, transmit or absorb electromagnetic fields based on the frequency of the field. In this sense, an FSS is a type of optical filter or metal-mesh optical filters in which the filtering is accomplished by virtue of the regular, periodic pattern on the surface of the FSS. Though not explicitly mentioned in the name, FSS's also have properties which vary with incidence angle and polarization as well - these are unavoida

Frequency selective surfaces can be thought of as passive electromagnetic filters. An FSS is typically composed of a periodic array of passive scattering structures of particular shape. Two classes of FSS can be distinguished based on whether the scatterers are apertures in a conducting screen or conducting objects arranged in a lattice.

Design of Multilayer Frequency-Selective Surfaces by Equivalent Circuit Method and Basic Building Blocks. An equivalent circuit method (ECM) is proposed for the design of multilayer frequency-selective surfaces (FSSs). In contrast to the existing ECMs that were developed mainly for the analysis of the properties of a given FSS, the presented ECM aims at providing the initial design parameters of an FSS from the desired frequency response.
