Acid Catalyzed Iodination Of Acetone

The acid-catalyzed iodination of acetone $\text{CH}_3\text{COCH}_3(\text{aq}) + \text{I}_2(\text{aq}) \rightarrow \text{CH}_3\text{COCH}_2\text{I}(\text{aq}) + \text{HI}(\text{aq})$ is a common laboratory experiment used in general chemistry courses to teach the method of initial rates. The reaction is followed spectrophotometrically by the disappearance of the color of iodine in the solution.

Acid catalyzed iodination of acetone is a complex reaction. The rate law for overall reaction cannot be determined from the balanced equation for the reaction but from experiments. When an aqueous iodine solution is reacted with acetone in the presence of an acid, the yellow color slowly fades as the iodine, I_2 , is consumed.

The Acid Catalyzed Iodination of Acetone Introduction: In this experiment we will be finding the exponential values for each part of our rate law equation. This can be found analytically, but to further understand the process we have done it experimentally.

The Acid Catalyzed Iodination of Acetone by Cayleigh A.

The acid-catalyzed iodination of acetone is a common laboratory experiment in general chemistry courses to teach the method of initial rates. The overall reaction is expressed as: $\text{CH}_3\text{COCH}_3(\text{aq}) + \text{I}_2(\text{aq}) \rightarrow \text{CH}_3\text{COCH}_2\text{I}(\text{aq}) + \text{HI}(\text{aq})$. The reaction is followed spectrophotometrically by the loss of the color of the iodine in solution.

Iodination of Acetone

For my IB HL chemistry internal assessment, I am investigating the kinetics of the reaction between iodine and acetone with sulphuric acid as the catalyst. My investigation involves calculating the activation energy of this reaction. But I also have to compare the value obtained with the "ACTUAL" value of the activation energy.

Acid Catalysed iodination of acetone - The Student Room

The iodination of acetone is also catalyzed by hydrogen ions. The effects of varying the concentrations of acetone, iodine and hydrogen ions have been studied earlier and it has been found that the reaction is zero order with respect to iodine. The overall stoichiometric equation for the iodination is:-

Kinetics of iodination of acetone, catalyzed by HCl and H SO

It was found that both Acetone and H^+ have a direct effect on the reaction rate of I_2 . The rate law for acetone iodination is $\text{rate} = k[\text{Acetone}][\text{H}^+]$. The average value of k calculated from the three trials was found to be about $2.32 \times 10^{-5} \text{ M}^{-1}\text{s}^{-1}$.
