Boilers are pressure vessels designed to heat water or produce steam, which can then be used to provide space heating and/or service water heating to a building. In most commercial building heating applications, the heating source in the boiler is a natural gas fired burner. Oil fired burners and electric resistance heaters can be used as well.

Find A User Guide Boiler | calendar.pridesource

There are virtually infinite numbers of boiler designs but generally they fit into one of two categories: Fire tube or "fire in tube" boilers; contain long steel tubes through which the hot gasses from a furnace pass and around which the water to be converted to steam circulates. (Refer Figure 2.2).

2. BOILERS - Bureau of Energy Efficiency

The Sandvik program covers tubes for many types of boiler applications. We offer, for example, superheater tubes and reheater tubes in a comprehensive range of stainless steels and nickel alloys. We also produce composite tubes, consisting of two different alloys fully bonded together. Call us Email us
