The polymer-gel phase transition therefore has the potential to be a central paradigm for mediating many aspects of cell function. These ideas are explored in depth in a recent book (Pollack, "Cells, Gels and the Engines of Life," 2001, www.ebnerandsons.com), and will be discussed in the lecture.

Cells, Gels and the Engines of Life. By Gerald H. Pollack, PhD. Ebner and Sons. Every now and then someone comes out with a book that forces us to look at things in a new way. Weston A. Price wrote such a book and so has Gerald Pollack. Pollack challenges the current view of the cell, the cell membrane and the role of water in the cell.

Cells, Gels and the Engines of Life by Gerald Pollack ...

Pollack finds the locus of most cell activity and function in the general phase-transition properties of gels. He cites the practical use of phase-transitioning gels in engineering and presents evidence of similar mechanisms at work in the major

functions of cells. In phase transitions, 'triggering is `razor-edge.'

Cells, Gels and the Engines of Life: Pollack, Gerald H ...

The basic engine of cellular energy is likened to a process of setting up and knocking down rows of dominoes. The bulk of effort goes into creations of order, essentially setting up dominoes in a row. This order can then be released, creating a rush of work energy with the mere touch of a finger (phase-transition trigger).

An award-winning book that challenges the current wisdom of how

cells work in a visionary, provocative, and accessible way... reads like a detective story. This highly praised book emphasises the role of cell water and the gel-like nature of the cell, building on these features to explore the mechanisms of communication, transport, contraction, division, and other essential cell functions.

2 Cells as gels Gels are built around a scaffold of long-chain polymers, often cross-linked to one another and invested with solvent. The cytoplasm is much the same. Cellular polymers such as proteins,

polysaccharides, and nucleic acids are long chained molecules, frequently cross-linked to one another to form a matrix.
