If you have a difficult recessed cut to make Wire EDM is an ideal
 process. It can be used to make fixtures, collets and jet engine
 blade slots, mold cooling ribs and reinforcing ribs. Since the
 electrode does not come in contact with the material, there’s no
 adhesion of the work piece to the tool.

A separate EDM head specifically for small hole drilling is mounted on a wire-cut machine and allows large hardened plates to have finished parts eroded from them as needed and without pre-drilling. Small hole EDM is used to drill rows of holes into the leading and trailing edges of turbine blades used in jet engines.

Because hole size must include a spark gap of 0.001 inch around the electrode, hole making for jet engine components typically involves electrodes from 0.015 to 0.028 inch in diameter. Drilling rates for EDM are quite fast. Mr. Beaumont says that a 1-mm hole can penetrate 0.5 inch of Inconel in about 20 seconds.
