Carbohydrates Analysis

A large number of analytical techniques have been developed to measure the total concentration and type of carbohydrates present in foods (see Food Analysis by Nielssen or Food Analysis by Pomeranz and Meloan for more details). The carbohydrate content of a food can be determined by calculating the percent remaining after all the other components have been measured: %carbohydrates = 100 - %moisture - %protein - %lipid - %mineral.

Carbohydrate Analysis - Creative Biolabs

Carbohydrates are difficult to analyze using common chromatography and detection methods. They are very polar compounds, exhibit similar structural characteristics, and lack a suitable chromophore. High-Performance Anion-Exchange Chromatography (HPAE) chromatography takes advantage of the weakly acidic nature of carbohydrates for highly selective separations at high pH using strong anion exchange stationary phases.
