### Computer Vision And Image Processing

Image processing is a subset of computer vision. A computer vision system uses the image processing algorithms to try and perform emulation of vision at human scale. For example, if the goal is to enhance the image for later use, then this may be called image processing. And if the goal is to recognise objects, defect for automatic driving, then it can be called computer vision.

### What Is The Difference Between Computer Vision And Image ...

When we talk about computer vision, it is a different story. In computer vision, an image or a video is taken as input, and nothing happens to the file itself. The goal is to interpret the image and its contents. Computer vision may indeed use some of the image processing algorithms to solve its tasks, but the processing is never a primary goal.
