Convex Optimization In Signal Processing

In the first part of the section, we formally define the dual problem of a (primal) convex constrained optimization problem. We establish relations between the primal and the dual optimal values, and investigate properties of the dual optimal solution set.

Convex Optimization in Signal Processing and Communications

Convex optimization was first used in signal processing in design, i.e., selecting weights or coefficients for use in simple, fast, typically linear, signal processing algorithms. In 1969, [23] showed how to use LP to design symmetric linear phase FIR filters. This was later extended to the design of weights

Real-Time Convex Optimization in Signal Processing. Abstract: This article shows the potential for convex optimization methods to be much more widely used in signal processing. In particular, automatic code generation makes it easier to create convex optimization solvers that are made much faster by

Convex Optimization in Signal Processing and Communications

Convex optimization has been used in signal processing for a long time, to choose coefficients for use in fast (linear) algorithms, such as in filter or array design; more recently, it has been used to carry out (nonlinear) processing on the signal itself. Examples of the latter case

Convex Optimization in Signal Processing and Communications

Convex optimization is a subfield of mathematical optimization that studies the problem of minimizing convex functions over convex sets. Many classes of convex optimization problems admit polynomial-time algorithms, whereas mathematical optimization is in general NP-hard. Convex optimization has applications in a wide range of disciplines, such as automatic control systems, estimation and signal processing, communications and networks, electronic circuit design, data analysis and modeling, finan
