PHP: PHP Manual - Manual

If someone encounters the interesting problem in which PHP can connect to a MSSQL server from the command line but not when running as an Apache module: SELinux prevents Apache (and therefore all Apache modules) from making remote connections by default.

PHP: mssql_connect - Manual

Most MySQL functions accept `link_identifier` as the last optional parameter. If it is not provided, last opened connection is used. If it doesn't exist, connection is tried to establish with default parameters defined in `php.ini`. If it is not successful, functions return `FALSE`.

PHP: MySQL Functions - Manual

□□. result. The result resource that is being evaluated. This result comes from a call to `mssql_query()`.. row. The row number. field. Can be the field's offset, the field's name or the field's table dot field's name (`tablename.fieldname`).

PHP: mssql_result - Manual

`mssql_free_statement()` only needs to be called if you are worried about using too much memory while your script is running. All statement memory will automatically be freed when the script ends. You may call `mssql_free_statement()` with the statement identifier as an argument and the associated statement memory will be freed.
