The crowns serve to keep the false tooth/teeth located in the middle of the bridge in place. The crowns can be supported by a person's natural teeth, or they can be placed over dental implants . The bridge may be made of several different types of material, including gold, alloys, or porcelain.

Dental Bridge: Procedure, Advantages, Disadvantages

A dental bridge essentially bridges a gap in your mouth. It involves replacing a missing tooth with a false tooth which is bonded to the natural teeth on either side of the gap. There are two main types of dental bridge. The most common type consists of two crowns, made of porcelain or metal, which are permanently bonded to your natural teeth either side of the space, with the false tooth (or teeth) in the middle.

Traditional Bridges. They consist of a crown built on either side of a missing tooth and includes a pontic to fill the gap. They can be installed on a tapered tooth or on a metal implant. Being the most popular among bridges, they are made of simple materials, such as porcelain, other ceramics or metal.

Dental Bridges - Costs and Information - The Dental Guide UK

Fixed Bridges are recommended when you have a missing tooth, or teeth. Not only does a Fixed Bridge improve your smile, but it also reduces the risk of gum disease, TMJ (temporomandibular joint) disorders and the misalignment of your bite. As the name suggests a fixed bridge cannot be removed as it is cemented onto your natural or crowned teeth.

Fixed Bridges | Crowns Now Family Dentistry | Dentist in ...

A fixed dental bridge permanently cements an artificial tooth (pontic tooth) to either your natural teeth, abutment teeth or dental implants. The teeth that are located on either side act as supports for the bridge. Fixed bridges are great for people who need to replace a gap between one or more

teeth. Benefits of Fixed Dental Bridges

Fixed Dental Bridges vs. Removable Dental Bridges ...

Fixed bridge: A dental prosthesis that is definitively attached to natural teeth and replaces missing teeth. Abutment: The tooth that supports and retains a dental prosthesis. Pontic: The artificial tooth that replaces a missing natural tooth. Retainer: The component attached to the abutment for retention of the prosthesis. Retainers can be major or minor.
