Routing Protocols and Concepts - Chapter 1

Distance vector routing protocols are protocols that use distance to work out the best routing path for packets within a network. These protocols measure the distance based on how many hops data has to pass to get to its destination. The number of hops is essentially the number of routers it takes to reach the destination.

A routing protocol, on the other hand, is only used between routers. Its purpose is to help routers building and maintain routing tables. The only two routed protocols you should worry about are IP and IPX (although Cisco has dropped IPX from the latest CCNA exam, it is helpful to understand the concepts behind it).

rating of the trustworthiness of a routing information source. Administrative distance is often expressed as a numerical value between 0 and 255. The higher the value, the lower the trustworthiness rating. If a router has multiple routing protocols in its routing table, it will select the route with the lowest administrative distance.
