Churn rate, in its broadest sense, is a measure of the number of

individuals or items moving out of a collective group over a specific period. It is one of two primary factors that determine the steady-state level of customers a business will support. The term is used in many contexts, but is most widely applied in business with respect to a contractual customer base, for example in businesses with a subscriber-based service model such as mobile telephone networks and pay TV operators. The term
