### **In Search of the Sea's Monsters and the World They Live**

*in Firefly Books Limited*  
Praise for the first edition: "More than a picture book ... Hoyt's elegant writing provides both the historical background for deep-sea exploration and an ecological perspective on life in the ocean's depths." -- American Scientist "A magnificent bestiary ...

and a reminder of how little we actually know about the seas surrounding us." -- Popular Science Winner, Outstanding Nonfiction Book of the Year -- American Society of Journalists and Authors, Inc., New York In this updated and expanded edition of *Creatures of the Deep*, award-winning nature and science writer Erich Hoyt gives readers a glimpse of the amazing variety of creatures found in the deepest parts of the ocean. Weaving together details from the latest scientific research about sharks, giant squid, dragonfish, huge tube worms, clams and tiny microbes of the deep-sea vents, Hoyt embarks on a magical journey roaming across the abyssal plains and

descending into deep-sea trenches more than 20,000 feet down. Hoyt unravels the complex predator-prey relationships, from "killer" copepods to battles between giant squid and sperm whales, presenting compelling portraits of animals that are superbly adapted denizens of a dark high-pressure world. There are life forms, independent of sunlight and photosynthesis, which flourish around the hot, sulfurous deep-sea vents in the magnificent rift valley of the mid-ocean ridge, the world's longest mountain range. Surviving in conditions that appear to be close to the very soup of primordial Earth, these microbes have become the basis for the latest

research into Earth's origins. Fully illustrated with fantastic underwater imagery.

### **Sea Room**

#### **An Island Life in the Hebrides** *Harper Collins*

In 1937, Adam Nicolson's father answered a newspaper ad—"Uninhabited islands for sale. Outer Hebrides, 600 acres. . . . Puffins and seals. Apply."—and thus found the Shiant Islands. With a name meaning "holy or enchanted islands," the Shiant Islands for millennia were a haven for those seeking

solitude, but their rich, sometimes violent history of human habitation includes much more. When he was twenty-one, Nicolson inherited this almost indescribably beautiful property: a landscape, soaked in centuries-old tales of restless ghosts and Bronze Age gold, that cradles the heritage of a once-vibrant world of farmers and fishermen. In *Sea Room*, Nicolson describes and relives his love affair with the three tiny islands and their strange and colorful history in passionate, keenly precise prose—sharing with us the greatest gift an island bestows on its inhabitants: a deep engagement with the natural world.

### **Weird Sea Creatures**

*Firefly Books*

An illustrated look at the weird and wonderful creatures that live in the very deepest parts of the sea. Humans have always wondered, with a mixture of fear and fascination, what lurks beneath the surface in the depths of the ocean. In this book,

Erich Hoyt introduces 50 of the oddest creatures you will ever meet in the sea. From the carnivorous comb jelly to the lantern-carrying deep-sea dragonfish, from a vampire squid with giant eyes to dancing jellyfish, Hoyt explores these peculiar conditions and their equally peculiar environment. These creatures have adapted to lack of light and, using sound pulses (echolocation) or light-producing organs and pigment cells (emitting light via bioluminescence), they are able to communicate without giving their location away to predators. These stunning, captivating photographs weren't taken from the portholes of

submarines. Photographers David Shale, Solvin Zanki and Jeff Rotman worked with oceanography institutes, museums and the BBC Natural History Unit, taking long cruises across the ocean to record and try to understand these little-studied residents of the deep sea. To capture the creatures for observation, a net was lowered far beneath the surface. As soon as the trawl was hauled aboard, the photographers would race to transfer the most unusual animals to fresh seawater aquariums in a chilled laboratory on board. These pages let readers gaze into strange, wild eyes and study faces with toothless or crooked smiles that witness the fruits of deep-sea

evolution. Informative captions explain what the patterns of lights on their bodies are "saying" to others in their absolutely dark world. The wonder and extraordinary weirdness of what lives in the deep seas, so far away from us and yet so close, will become more familiar with this book.

## **Journey into the Deep**

### **Discovering New Ocean Creatures** *Millbrook Press* <sup>TM</sup>

Have you ever wondered what mysteries the ocean holds? Prepare to explore the ocean from sunlit shallows to the deepest, darkest depths. Along the way, you'll meet many incredible creatures that are brand new to

science. Dive to a coral reef and spot a new species of pygmy octopus. Travel deeper and discover fragile, nearly transparent jellies as they drift past. Then head down into a world of eternal night. You'll encounter animals that make their own light and zombie worms that feast on the bones of dead whales. Your adventure is based on the real journeys of scientists involved in the Census of Marine Life. From 2000 to 2010, more than two thousand researchers from eighty-two countries carried out the most extensive investigation of ocean life ever attempted. Author Rebecca L. Johnson takes readers to research sites around the globe, showing how ocean

scientists do their work. Stunning photographs throughout bring readers face-to-face with some of the most mesmerizing creatures on Earth.

### **Astonishing Animals**

### **Extraordinary Creatures and the Fantastic Worlds They Inhabit**

*Open Road + Grove/Atlantic*  
From the authors of *A Gap in Nature*, a breathtaking visual adventure showcasing ninety of the world's most astounding creatures. Sumptuous birds of paradise, amazing soft-shell turtles, frogs that look like tomatoes, and terrifying fish (including the deep-water angler fish from *Finding Nemo*) are just some of the

extraordinary creatures that can be found in Tim Flannery and Peter Schouten's new book, *Astonishing Animals*. Superbly illustrated in lifelike full-color paintings, *Astonishing Animals* details ninety of the world's most amazing animals from around the world. In this book you will find the Hairy Seadevil, the spectacular Sulawesi Naked Bat, and in the depths of the limestone caves in Slovenia, the Olm, a pink, four-legged, sightless salamander that lives for a hundred years. In fascinating vignettes, Flannery offers the true evolutionary tale of how each of these bizarre creatures came to look the way they do. Alongside each historical account is a

stunning hand-painted color reproduction (life-size in the original painting) by Schouten. Filled with purple-faced apes, jagged-toothed dolphins, and antlered lizards, *Astonishing Animals* is a remarkable collection of the world's most incredible creatures and the stories behind their remarkable survival into a modern age.

### **Oceanic Anglerfishes**

**Extraordinary Diversity in the Deep Sea** *Univ of California Press*

No environment on Earth imposes greater physical and biological constraints on life than the deep oceanic midwaters. Near-freezing temperatures, the absence of sunlight, enormous pressure, and a low food supply make habitation by any living thing almost inconceivable. Yet 160 species of anglerfishes are found there in surprising profusion. Monstrous in appearance,

anglerfishes possess a host of unique and spectacular morphological, behavioral, and physiological innovations. In this fully illustrated book, the first to focus on these intriguing fish, Theodore W. Pietsch delivers a comprehensive summary of all that is known about anglerfishes—morphology, diversity, evolution, geographic distribution, bioluminescence, and reproduction.

### **Life in the Dark**

**Illuminating Biodiversity in the Shadowy Haunts of Planet Earth** *Johns Hopkins University Press+ORM*

An extreme wildlife photographer explores

the bizarre species that thrive in complete darkness with more than 200 mesmerizing color photos. Deep inside caves, at the bottoms of oceans and lakes, beneath the ground: these concealed habitats are absent of sunlight, and yet full of life. This strange world of complete darkness is inhabited by millions of life forms that most humans have never seen. Now Danté Fenolio brings the denizens of these shadowy haunts into focus. Life in the Dark shows us the many ways in which life forms have adapted to lightless environments, including refinements of senses, evolution of unique body parts, and illumination using "biological flashlights." Discover fascinating

creatures like the firefly squid, the giant Amazonian catfish, the Chinese cavefish, and even the human bot fly, which lives in the darkness beneath its host's skin. Fenolio's rich and vibrant images shed new light on the world's fascinating creatures of darkness.

BLACK & WHITE  
VOLUME Meet some of the scariest monsters of the deep! Discover Some of the Strangest Animals that Live in the Ocean. This is the 9th book in a series of titles about the

strangest creatures in the animal kingdom on land and in the oceans. The world is filled with an endless variety of creatures. Some are amazing, some are highly unusual, some are terrifying, while some are all of these combined.

Unfortunately, not everyone will ever get the chance to see these marvelous creatures in person. But don't worry; the aim of this book is to bring the hidden world of strange creatures to your fingertips! This Book Has Amazing Facts & Photos of 25 Incredibly Strange and Spooky Animals. The surface of the planet earth is 70% covered in oceans. Aside from regulating the global temperature and weather, all living organisms in the world

originated from the oceans. The problem is 95% of the ocean remains unexplored by human. This is because humans are yet to invent the technology needed to explore most of the ocean. The good news is that the 5% of the ocean we've explored so far is home for the strangest and most peculiar creatures. These are the creatures you are about to discover in this book. This book is fully illustrated and has simple blocks of text that will make learning fun for your child. Most of the creatures in this book live in depths only a few people can go to. Learn how these creatures behave, look like, and what they eat. The following creatures featured are: Deep Sea Dragonfish Deep Sea Anglerfish Fangtooth

### **The Pop-Up Book**

The magnificent prints  
of Ernst Haeckel, who  
captured the amazing  
forms of the natural  
world, spring to life in  
this exciting pop-up  
book that reveals the  
vibrant intricacy of his  
work. The book *Art  
Forms in Nature* is a  
collection of prints,  
made by the scientist  
Ernst Haeckel, of an  
enormous variety of  
flora and fauna from  
the sea—including  
microscopic Radiolaria,  
starfish, and jelly fish.

Since Prestel published it in 1998, the book has been a favorite with artists, designers, illustrators, and anyone who enjoys the wondrous forms of the natural world. Now paper engineer Maike Biederstaedt has transformed Haeckel's transcendent work into a three-dimensional book that allows readers to appreciate Haeckel's vivid colors, exceptional precision, and fascination with patterns and geometry. This stunning book features seven pop-ups that allow readers to see nature's brilliance the way that Haeckel did--as marvelous, mathematically based creations that support his theory of the unity of all living things. Certain to appeal to his huge variety of fans,

this pop-up version of a timeless classic will be treasured for years to come.

## **Oceanology**

### **The Secrets of the Sea Revealed** *Penguin*

Dive into this uniquely elegant visual exploration of the sea. An informative and utterly beautiful introduction to marine life and the ocean environment, *Oceanology* brings the riches of the underwater world onto the printed page. Astounding photography reveals an abundance of life, from microscopic plankton to great whales, seaweed to starfish. Published in association with the Smithsonian Institution, the book

explores every corner of the oceans, from coral reefs and mangrove swamps to deep ocean trenches. Along the way, and with the help of clear, simple illustrations, it explains how life has adapted to the marine environment, revealing for example how a stonefish delivers its lethal venom and how a sponge sustains itself by sifting food from passing currents. It also examines the physical forces and processes that shape the oceans, from global circulation systems and tides to undersea volcanoes and tsunamis. To most of us, the marine world is out of reach. But with the help of photography and the latest technology, Oceanology brings us up close to animals,

plants, and other living things that inhabit a fantastic and almost incomprehensibly beautiful other dimension.

**Exploding Ants and Other Amazing Defenses** *Searchlight Books Animal Super*

"This book describes the amazing and uncommon ways in which animals defend themselves from predators, from playing dead to shooting blood from their eyes."--

**Remarkable Creatures**

**Epic Adventures in the Search for the Origins of Species** *HMH*

National Book Award Finalist: A biologist's "thoroughly enjoyable" account of the expeditions that

unearthed the history of life on our planet (Publishers Weekly). Not so long ago, most of our world was an unexplored wilderness. Our sense of its age was vague and vastly off the mark, and much of the knowledge of our own species' history was a set of fantastic myths and fairy tales. But scientists were about to embark on an amazing new era of understanding. From the New York Times–bestselling author of *The Big Picture*, this book leads us on a rousing voyage that recounts the most important discoveries in two centuries of natural history: from Darwin's trip around the world to Charles Walcott's discovery of pre-Cambrian life in the Grand Canyon;

from Louis and Mary Leakey's investigation of our deepest past in East Africa to the trailblazers in modern laboratories who have located a time clock in our DNA. Filled with the same sense of adventure that spurred on these extraordinary men and women, *Remarkable Creatures* is a "stirring introduction to the wonder of evolutionary biology" (Kirkus Reviews). "Charming and enlightening." —San Francisco Chronicle "As fast-paced as a detective story." —Nature

### **The World Beneath**

### **The Life and Times of Unknown Sea Creatures and Coral Reefs**

*Apollo Publishers*

Meet the world's most

fascinating sea creatures—see the lives and curiosities of colorful fish and coral reefs—this spectacular volume has more than 300 color photos and extraordinary text from a leading marine biologist and underwater photographer, and the international expert on seahorses. In this richly informative volume, brimming with new discoveries and more than three hundred colorful images of jaw-dropping fish and coral reefs, you'll swim in the Atlantic, Pacific, and Indian Oceans; you'll be dazzled in the Coral Triangle and amazed in Triton Bay. Up close you'll meet the Cenderawasih fairy wrasse, with its florescent yellow streak; the polka-dot longnose filefish; and the multicolored seadragon. There are scarlet-colored corals, baby-blue sponges, daffodil crinoids, and all sorts of mystifying creatures that change color at the drop of a hat. The whale shark is almost larger than life and the author's beloved pygmy seahorse, unless photographed, is almost too tiny to see. The wondrous creatures inside are charmers and tricksters and excel in the arts of seduction and deception, and you'll have the rare chance to see and delight in their antics. You'll also learn what they eat, how they play, and how they care for one another, live on one another, and mimic others when they're afraid. There is also compelling insight

into the naming process, which sea creatures are facing extinction, and how we can help them before it's too late.

**Strange Sea  
Creatures** *Firefly  
Books*

Praise for *Creatures of the Deep: In Search of the Sea's Monsters and the World They Live In*: "Erich Hoyt captures the excitement and beauty of recent advances [in ocean science]. With lavish photos and engaging, accurate prose, he takes readers on a journey of wonder through the ocean's layers and around the planet, shedding light on extraordinary lives." -- BBC Wildlife Marine researchers are discovering new ocean creatures every day, especially at its

deepest depths. From the author of *Creatures of the Deep*, *Encyclopedia of Whales, Dolphins and Porpoises* and other books about the ocean and the animals that live there, comes a new title about some of the most unusual marine life forms. The book organizes the creatures into three parts based on where they live in the ocean. Each part has representatives from the various marine animal classes (e.g., fish, crustaceans, jellyfish and siphonophores, squids, tunicates and other invertebrates). Informative captions accompany the 90 gorgeous photographs of otherworldly creatures. Part 1: Surface Waters of the Ocean at Night: The

Blackwater Vertical Migrants In images taken by dedicated blackwater photographers Linda Ianniello and Susan Mears, these mostly larval creatures haunt the near-surface waters making vertical migrations every night to feed. Part 2: Middle to Deep Dark Waters: Masters of the Language of Light In this perpetual night, survival is a matter of being able to understand and process light signals, some in different colors, some flashing, some faint -- the most sophisticated use of bioluminescence on Earth. The sea creatures here are small with big eyes and even larger mouths with extraordinarily sharp teeth. Photographer David

Shale traveled with BBC Blue Planet and other expeditions to photograph these deep sea creatures, while photographers Solvin Zankl, Alexander Semenov and others brought their own dedication to expeditions in the Pacific, Indian, Atlantic and Arctic oceans. Part 3. The Continental Shelf to the Abyssal Plain: The Bottom Dwellers This bottom of the sea has fewer fish, and is populated by such alien-like creatures as no-eyed or tripod fish, sea cucumbers, as well as basket stars, crabs, and worms with species varying by depth and location. The introduction to each part of the book describes what makes the ocean waters at that depth unique, and

why it is home to specific types of sea life. The photographs were taken in the ocean by expert divers and submariners, most of whom are both scientists and underwater photographers. The images display the creatures vividly against a background as black as the ocean depths.

## **The Deep**

### **The Hidden Wonders of Our Oceans and How We Can Protect Them** *Wildfire*

There's so much we don't know about what lies deep beneath the ocean's surface - and the time to find out is growing increasingly precious . . . Professor Alex Rogers is one of the world's leading experts in marine

biology and oceanology, and has spent his life studying the deep ocean - and in particular the impact of human activity on the ecosystems of the oceans. In this timely, galvanising and fascinating book - replete with stunning photography of strange and beautiful creatures - Professor Rogers offers a fundamentally optimistic view of humanity's relationship with the oceans - and also a very personal account of his own interaction with the seas.

### **Sex, Drugs, and Sea Slime**

### **The Oceans' Oddest Creatures and Why They Matter** *University of Chicago Press*

When viewed from a

quiet beach, the ocean, with its rolling waves and vast expanse, can seem calm, even serene. But hidden beneath the sea's waves are a staggering abundance and variety of active creatures, engaged in the never-ending struggles of life—to reproduce, to eat, and to avoid being eaten. With *Sex, Drugs, and Sea Slime*, marine scientist Ellen Prager takes us deep into the sea to introduce an astonishing cast of fascinating and bizarre creatures that make the salty depths their home. From the tiny but voracious arrow worms whose rapacious ways may lead to death by overeating, to the lobsters that battle rivals or seduce mates with their urine, to the sea's masters of disguise, the octopuses, Prager not only brings to life the ocean's strange creatures, but also reveals the ways they interact as predators, prey, or potential mates. And while these animals make for some jaw-dropping stories—witness the sea cucumber, which ejects its own intestines to confuse predators, or the hagfish that ties itself into a knot to keep from suffocating in its own slime—there's far more to Prager's account than her ever-entertaining anecdotes: again and again, she illustrates the crucial connections between life in the ocean and humankind, in everything from our food supply to our economy, and in drug discovery, biomedical

research, and popular culture. Written with a diver's love of the ocean, a novelist's skill at storytelling, and a scientist's deep knowledge, *Sex, Drugs, and Sea Slime* enchants as it educates, enthraling us with the wealth of life in the sea—and reminding us of the need to protect it.

**Monsters of the Deep** *Firefly Books Limited*

A spectacular collection of weird yet real creatures from the darkest depths of the oceans. In this book, readers get a look into the watery deep and find 14 of nature's strangest creatures. Intricately drawn artworks and 200 stunning photographs highlight the extraordinary features

of each animal's anatomy and survival tactics, such as bioluminescence to ward off predators and jet propulsion (in one case, jet vomit) to escape quickly. The monsters include deep-sea fish, squid, jellyfish, and microscopic life, such as: Black dragonfish, the inspiration for the parasitic Alien monsters Deep-sea hatchet fish, google-eyed and bioluminescent Deep-sea mussels that use bacterial "fuel cells" to harness energy from hydrothermal vents Deep-sea shrimp that spew bioluminescent vomit to escape predators Eyelight fish turn their "flashlight" eyes off and on while hunting Japanese firefly squid, bioluminescent, whose

blue flashes attract small fish on which it feeds. Lanternshark, totally bioluminescent in the deep sea Pelican eel, with a comically oversized mouth and a tail so long that it gets tied in knots. Monsters of the Deep is an exciting, informative collection that will interest readers of all ages.

#### **Extraordinary Encounters Between the Tides** *September Publishing*

'I recommend Heather's book to everyone. It's brilliant!' Dara McNulty, author of *Diary of a Young Naturalist* An entrancing book of exploration, marine life and natural wonders. 'Wherever I go, I seek out beaches. They are

woven through my life; a changing constant in a constantly changing world. Every walk through the rock pools, from the tideline to the low water mark, takes me on a journey into the sea and challenges my understanding of my world and of myself.' The British beach is full of creatures that we think we know - from crabs to clams, starfish to anemones. But, in fact, we barely understand how many survive or thrive. In *Rock Pool* the delights of childhood paddling are elevated to oceanic discoveries, as the fragile beauty and drama of intertidal existence is illustrated through the incredible lives of twenty-four individual creatures. The eye-opening account of a life-long passion by a talented

writer and naturalist. 'Here are three simple steps to help you feel better about the world: read Heather Buttivant's marvellous book, grab a pair of wellies and get yourself to a rocky shore ... [a] thoughtful, enlightening and entertaining read.' BBC Wildlife Magazine

#### **Tales from a Lifetime Spent with Cobras, Crocs, and Other Extraordinary Creature s** *Villard*

From catching alligators in the reservoirs of New York and capturing giant crocodiles in Venezuela and giant frogs in West Africa to finding mummified human heads in a Bronx apartment, eels on a bus, cobras on the

loose, and crocodiles that make change—a memoir of one man's career working with exotic reptiles and other animals. After the teenage Peter Brazaitis brought home one creepy crawly creature too many, his stepmother declared, "You are an animal, and you belong in a zoo!" He took her at her word. He went directly from high school in Brooklyn to a job at the Reptile House at the Bronx Zoo, where he stayed for more than thirty years, eventually becoming superintendent of reptiles. He later became curator of the Central Park Zoo, and continues to work with law enforcement as a forensic specialist in the fight to stop illegal importation and

slaughter of reptiles for the luxury exotic-leather industry. (His effectiveness at this would earn him the moniker "The Bald-Headed Snake Keeper in the Bronx.") You Belong in a Zoo! presents the amazing experiences Brazaitis has had in more than four decades of working with wild animals. Enlightening, funny, and often outrageous, You Belong in a Zoo! is a fascinating behind-the-scenes look at zoos, animal people, and some of nature's most extraordinary creatures.

### **A Most Remarkable Creature**

**The Hidden Life of the World's Smartest Birds of Prey** *Vintage*

"Utterly captivating and beautifully written, this book is a hugely entertaining and enlightening exploration of a bird so wickedly smart, curious, and social, it boggles the mind."—Jennifer Ackerman, author of *The Bird Way* "A fascinating, entertaining, and totally engrossing story."—David Sibley, author of *What It's Like to Be a Bird* An enthralling account of a modern voyage of discovery as we meet the clever, social birds of prey called caracaras, which puzzled Darwin, fascinate modern-day falconers, and carry secrets of our planet's deep past in their family history. "As curious, wide-ranging, gregarious, and

intelligent as its subject.”—Charles C. Mann, author of *1491*

In 1833, Charles Darwin was astonished by an animal he met in the Falkland Islands: handsome, social, and oddly crow-like falcons that were “tame and inquisitive . . . quarrelsome and passionate,” and so insatiably curious that they stole hats, compasses, and other valuables from the crew of the *Beagle*. Darwin wondered why these birds were confined to remote islands at the tip of South America, sensing a larger story, but he set this mystery aside and never returned to it. Almost two hundred years later, Jonathan Meiburg takes up this chase. He takes us through South America, from the fog-bound coasts of Tierra del Fuego to the tropical forests of Guyana, in search of these birds: striated caracaras, which still exist, though they’re very rare. He reveals the wild, fascinating story of their history, origins, and possible futures. And along the way, he draws us into the life and work of William Henry Hudson, the Victorian writer and naturalist who championed caracaras as an unsung wonder of the natural world, and to falconry parks in the English countryside, where captive caracaras perform incredible feats of memory and problem-solving. A Most Remarkable Creature is a hybrid of science writing, travelogue, and biography, as generous

and accessible as it is sophisticated, and absolutely riveting.

Mary Anning, born in a poor family, lived in Lyme Regis and from an early age was fascinated by the fossils, then called snake stones and devil's toenails, that could then be picked up on the beaches. She became far more interested when she realised that these could be sold to the gentry who had grown into avid collectors. She was supported by her family in her enterprise but was often ripped off by the buyers and derided by the scientists. One

person came to her rescue: Elizabeth Philpot, daughter of a wealthy family who had settled in Dorset to escape the stultifying respectability of genteel London society. The two women, of different ages and very different class and background, became unlikely friends but the relationship was to take on stranger twists as the excitement of the fossil discoveries - Mary Anning finds the first complete plesiosaur - turns to religious difficulties as the importance of these finds begins to spread.

### **James Cameron's Aliens of the Deep**

*National Geographic*

Far Beneath the Ocean's Surface, Beyond the reach of

the sun, an astonishing community of animals lives in a world of searing heat, intense pressure, and absolute darkness. In *Aliens of the Deep*, Academy Award-winning filmmaker James Cameron and a crew of scientists embark on an extraordinary mission to document this extreme environment. What they learn about the deep sea may one day help scientists search for life on other worlds. *Aliens of the Deep* takes readers miles below the sea to volcanic hot springs-hydrothermal vents-where superheated water flows from Earth's crust into the cold, deep ocean. These vents are surprising oases of life, home to blind crabs, seething hordes of

shrimp, reefs of mussels and clams, and swarms of microbes that have found a way to adapt in one of the most unlikely places on the planet. Unknown until 1977 and still largely unexplored, hydrothermal vent fields support no life-giving photosynthesis. Yet many scientists believe that at sites like these, life on Earth may have begun. Spectacular high-resolution photography brings this breathtaking world into focus: jellyfish that appear to glow from within, hideous-looking angler-fish, and the stunning architecture of the calcite towers of a site dubbed "Lost City." Aliens of the Deep asks: If life can survive in this extreme environment on Earth,

can the conditions to sustain life exist elsewhere in the universe? Veteran ocean explorer and writer Dr. Joseph MacInnis follows Cameron and his crew as they overcome technical and physical challenges to make a giant-screen film that provides an unprecedented view of this savage and surreal world.

Alli-Kar, a white-hole portal from another universe, rains meteoroids onto the surface of the planet Kelanni. But the so-called "lodestones" behave according to different physical laws, transforming Kelanni's society. With the aid of the fearsome Keltar in their flying cloaks, the Kelanni are being put to forced labor to mine the lodestones. Shann, an orphan with a fiery disposition, witnesses a battle between a Keltar and a stranger bearing a similar flying cloak. She tracks down the stranger, learning of the technology behind the Keltars' power and joining him on a mission to free the slaves and cut off their supply of lodestones.

Meanwhile Keris, a Keltar, is sent on a mission to track down the rebels. She is attacked by a flying creature and saved by the enigmatic Chandara. At their Great Tree, she learns that a mysterious "Prophet" is out to destroy the Kelanni people. Their only hope is a powerful instrument hidden in the distant past. Pursued by Keltar, the party will encounter bizarre creatures, ancient technologies and terrifying dangers. Finally, they must seek to cross a massive storm barrier in order to reach the other side of their world, where a world-shaking revelation awaits.

A child's dream takes us on a journey through space. The child looks for a place to land while exploring each planet, but some are too hot, some are too cold, and some are just made of liquid and gas. Only planet Earth is just right. Fun rhyming text introduces children to each planet and basic facts about it. The text is accompanied by stunning images of a rocket traveling through the solar system, interspersed by close up images of each planet in order. While each planet is amazing in its own way, there is only one we can call home. If parents choose, this can be the start to a conversation about how we can take better care of our planet. Visit

#### **Unapologetically, Me. CreateSpace**

This book is a compilation of my thoughts-- transformed into poems, quotes, and self notes. At the unseasoned age of 20, I can testify to life taking me through

some expected changes and detours. There were many days that I couldn't speak, think, or even write clearly. Through silence, prayer, and this little writing outlet, I've learned so much. I've found inspiration in the most unexpected places. I've learned that it's okay to cry. It's okay to not know all the answers. It's okay to be you--Unapologetically you. Sometimes, it's even okay to feel lost.. So long as you remember who you are. We're all destined for greatness and success. I pray this book opens minds, encourages smiles, and inspires creativity. Above all, I'm forever grateful to my Heavenly Father for his magnificent plan over my life.

## **Power of Thinking Big** *CreateSpace*

Success is measured not by the size of your brain, but rather by the size of your thinking. This intrigues a lot of people, and if you observe how people behave, you will have a clear understanding of what success really means. Time and time again, history and experience have proved that the degree of our general satisfaction and happiness is dependent on how we think. There is magic in thinking big! Positive thinking helps accomplish so much in our life, but unfortunately not everyone thinks that way. We are all products of our thinking that goes within and around us. There is an

environment around us that exerts all sorts of forces on your thinking; some will push you up the ladder while others will pull you down. We have been told many times that opportunities to lead are no longer there; hence we should be content with who we are without having positive aspirations on leadership. The petty environment surrounding us also has its own narrative concerning our lives. It constantly tells us that whatever is destined will eventually happen and we have no control over it. Leaving your fate in the hands of chance can potentially ruin your life and make you miserable. Therefore, before you start giving up your dreams of a finer home or giving a better life

for your children, stand firm and resist resigning to fate. Do not lie down and wait to die. Success is worth every effort you expend, and every step you make pays a dividend. Even in an environment where competition is intense, you still can succeed as long as your thinking is in the positive quadrant of your mind frame. The basic concepts and principles that underlie the power of thinking big are drawn from the highest-pedigree sources and the finest thinking minds such as Emerson who said "Great men are those who see that thoughts rule the world." Milton who wrote in his book *Paradise Lost*, "The mind is its own place and in itself can make a heaven of hell or a

hell of heaven." Shakespeare made an interesting observation about thinking which he summarized and said "There is nothing either good or bad except that thinking makes it so." Proof is everywhere that thinking big indeed works. When you look at the lives of people who you consider as big thinkers, you will be amazed at their winning success, happiness and achievements. This book will show you proven strategies from different life situations that will turn your life around.

## **Extraordinary Insects**

**Weird. Wonderful.  
Indispensable. the  
Ones Who Run Our  
World** *HarperCollins*

A journey into the weird, wonderful and truly astonishing lives of the small but mighty creatures who keep the world turning. Out of sight, underfoot, unseen beyond fleeting scuttles or darting flights, insects occupy a hidden world, yet are essential to sustaining life on earth. Insects influence our

ecosystem like a ripple effect on water. They arrived when life first moved to dry land, they preceded - and survived - the dinosaurs, they outnumber the grains of sand on all the world's beaches, and they will be here long after us. Working quietly but tirelessly, they give us food, uphold our ecosystems, can heal our wounds and even digest plastic. They could also provide us with new solutions to the antibiotics crisis, assist in disaster zones and inspire airforce engineers with their flying techniques. But their private lives are also full of fun, intrigue and wonder - musical mating rituals; house-hunting for armies of beetle babies; metamorphosing into

new characters; throwing parties in fermenting sap; cultivating fungi for food; farming smaller species for honey dew and always ensuring that what is dead is decomposed, ready to become life once again. Here, we will discover life and death, drama and dreams, all on a millimetric scale. Like it or not, Earth is the planet of insects, and this is their extraordinary story.
