The Kalman Filter produces estimates of hidden variables based on inaccurate and uncertain measurements. As well, the Kalman Filter provides a prediction of the future system state, based on the past estimations. The filter is named after Rudolf E. Kalman (May 19, 1930 – July 2, 2016). In 1960, Kalman published his famous paper describing a ...

As we remember the two equations of Kalman Filter is as follows: It means that

each x_k (our signal values) may be evaluated by using a linear stochastic equation (the first one). Any x_k is a linear combination of its previous value plus a control signal k and a process noise (which may be hard to conceptualize).
