Renewable Heating and Cooling | ScienceDirect

Renewable Heating and Cooling: Technologies and Applications presents the latest information on the generation of heat for industry and domestic purposes, an area where a significant proportion of total energy is consumed. In Europe, this figure is estimated to be almost 50%, with the majority of heat generated by the consumption of fossil fuels.

Abstract. District heating works very well indeed with renewable heat resources such as biomass, solar, and geothermal—with as well as without seasonal storage. The paper gives markets and applications for “Renewable District Heating and Cooling,” estimates renewable heat resources, and describes the energy technologies and storages technologies.

The simplest form of renewable cooling relies on pumping water from a cold reservoir or chilling water by pumping it through underground pipes. Other renewable thermal technologies can cool spaces using a technology called absorption refrigeration—a type of air conditioning that uses a refrigerant chemical to produce cold air from hot water.

However, global policy support for renewable heating and cooling (RHC) technologies pales in comparison to renewable electricity. Out of 194 total countries, 146 have some form of either a

national, state, or provincial target for renewable electricity, whereas only 48 countries have some sort of renewable heating and cooling target.

Renewable Heating and Cooling Lags Behind Renewable

...

Geothermal energy is considered a renewable resource. Ground source heat pumps and direct use geothermal technologies serve heating and cooling applications, while deep and enhanced geothermal technologies generally take advantage of a much deeper, higher temperature geothermal resource to generate electricity.

Geothermal heat pumps, also known as geoexchange systems, are energy efficient, clean, and cost effective technologies that are quickly gaining popularity. Geothermal heat pumps, use heat stored in the ground, as a natural renewable source for space heating and cooling, as well as water heating in a home.

The European Technology and Innovation Platform on

Renewable Heating & Cooling (RHC-ETIP) brings together stakeholders from the biomass, geothermal, solar thermal and heat pump sectors – including the related industries such as district heating and cooling, thermal energy storage, and hybrid systems – to define a common strategy for increasing the use of renewable energy technologies for heating and cooling.

ETIP on Renewable Heating and Cooling (RHC-ETIP)

RH&C technologies such as air-source heat pumps, ground-source heat pumps, solar thermal, heat pump water heaters, and advanced biomass pellet boilers can use renewable energy

sources to provide space heating and cooling and domestic hot water. These technologies can be used for whole home applications or for supplemental heating and cooling.

Renewable Energy

As heating and cooling technologies become more intelligent, the flexibility available to the energy system is increased and the associated costs lowered. ICT plays an increasing role in reducing the energy intensity of our applications, therefore enabling renewable heating and cooling systems to satisfy a higher share of the energy demand.
