Global navigation satellite system (GNSS) is a general term describing any satellite constellation that provides positioning, navigation, and timing (PNT) services on a global or regional basis. While GPS is the most prevalent GNSS, other nations are fielding, or have fielded, their own systems to provide complementary, independent PNT capability. The main ones are described below. GNSS can also refer to augmentation systems, but there are too many international augmentations to list here.

A smartphone identifies its position via either satellite radio signals or GNSS (Global Satellite Navigation Systems (GNSS)). Currently, the vast majority of smartphones in the market are configured for a single-frequency GNSS, which means that the smartphone can track a single radio signal from a satellite.

Advantages of dual-frequency GNSS in smartphones

The Russian Global Navigation Satellite System GLONASS is similar in operation as GPS and may prove complimentary to the NAVSTAR system. Launched in 1996, its constellation is orbiting 19,100 Km above the earth in three orbital planes. The development of the European GNSS system, GALILEO, began in 1999.
