As such all models with random effects also contain at least one fixed effect. Therefore, a model is either a fixed effect model (contains no random effects) or it is a mixed effect model (contains both fixed and random effects). Mixed effects models are often referred to as mixed models.

Mixed Models: Models

Mixed models are especially useful when working with a within-subjects design because it works around the ANOVA assumption that data points are independent of one another. In a within subjects design, one participant provides multiple data points and those data will correlate with one another because they come from the same participant.

Random effects models include only an intercept as the fixed effect and a defined set of random effects. Random effects comprise random intercepts and / or random slopes. Also, random effects might be crossed and nested. In terms of estimation, the classic linear model can be easily solved using the least-squares

method.
