In the USA regulatory requirements address water intake structures, air emissions, and discharge of blowdown water. Currently, under Section 316(b) of the Clean Water Act, it has been proposed to implement more stringent protection measures at water intake structures to protect fish, shellfish, and other aquatic life (USEPA, 2002a). This proposed regulation could lead to the need for retrofitting of once-through cooling water intakes and ultimately lead to increased use of recirculating

systems.

Abstract. Sponsored by the Energy Division of ASCE. Guidelines for Design of Intakes for Hydroelectric Plants examines the hydraulic and structural considerations applicable to the sound environmental design of hydropower intakes. The designer of a hydroelectric facility must consider the protection and preservation of fish, wildlife, recreational opportunities, and environmental quality, while at the same time ensuring that the plant operates at maximum efficiency.
