Boundary Behavior The Physics Classroom

The behavior of a wave (or pulse) upon reaching the end of a medium is referred to as boundary behavior. When one medium ends, another medium begins; the interface of the two media is referred to as the boundary and the behavior of a wave at that boundary is described as its boundary behavior. The questions that are listed above are the types of questions we seek to answer when we investigate the boundary behavior of waves.

Physics Tutorial: Boundary Behavior

The boundary behavior of light waves has already been introduced in Unit 12 of The Physics Classroom Tutorial. In this unit, we will focus on the refraction of light in great detail. We will explore the conceptual and mathematical principles governing the bending of waves as they cross the boundary between two media.

Physics Tutorial: Boundary Behavior

The behavior of a wave (or pulse) upon reaching the end of a medium is referred to as boundary behavior. There are essentially four possible behaviors that a wave could exhibit at a boundary: reflection (the bouncing off of the boundary), diffraction (the bending around the obstacle without crossing over the boundary), transmission (the crossing of the boundary into the new

material or obstacle), and refraction (occurs along with transmission and is characterized by the subsequent change in ...

Boundary Behavior - The Physics Classroom

It was mentioned that a light wave doesn't just stop when it reaches the end of the medium. Rather, the light wave undergoes certain behaviors when it encounters the end of the medium - such behaviors include reflection, transmission/refraction, and diffraction. In Unit 13 of The Physics Classroom Tutorial, the primary focus was the reflective behavior of light waves at the boundary.

Physics Tutorial: Boundary Behavior Revisited

Light is observed to change directions as it crosses the boundary separating the air and the glass. This bending of the path of light is known as refraction. A one-word synonym for refraction is bending.
