Global Climate Change Flashcards | Quizlet

Recent studies that investigated climate change effects on the growth potential and availability of suitable marine areas for mariculture (Froehlich, Gentry, & Halpern, 2018; Klinger, Levin, & Watson, 2017) suggest that climate change impact will be heterogeneous across species and regions. Noticeable adverse effects are projected for mariculture-suitable marine areas around the equator with substantial gains towards the poles.

Projecting global mariculture diversity under climate change

Climate Change. Climate change is occurring, is caused largely by human activities, and poses significant risks for a broad range of human and natural systems. Human activities largely determine the evolution of the Earth's climate, which not only impact the next few decades, but the coming centuries and millennia.
