one of the most important tasks in statistics. A linear model for the data assumes that it is generated according to $Y = X\beta + \epsilon$; (0.0.1) where Y is the vector of responses; X is the predictor matrix (or design matrix) with i th row x_i^T ; ϵ represents random error; and β is the unknown vector of coefficients.

A statistical model is a mathematical model that embodies a set of statistical assumptions concerning the generation of sample data (and similar data from a larger population). A statistical model represents, often in considerably idealized form, the data-generating process. A statistical model is usually specified as a

mathematical relationship between one or more random variables and other non-random variables. As such, a statistical model is "a formal representation of a theory" (Herman Adèr
