Analysis of a structure involves its study from the viewpoint of its strength, stiffness, stability, and vibration. For a structural engineer to start a structural design, he/she must have the loads, or forces and moments that a particular member and the structure as a whole have to resist. Unless there are determined the design cannot start.

According to the classical theories of elastic or plastic structures made from a material with non-random strength, the nominal strength of a structure is independent of the structure size when geometrically similar
