The Weibull plot (Nelson 1982) is a graphical technique for determining if a data set comes from a population that would logically be fit by a 2-parameter Weibull distribution (the location is assumed to be zero). The Weibull plot has special scales that are designed so that if the data do in fact follow a Weibull distribution, the points will be linear (or nearly linear).

1.3.3.30. Weibull Plot

Many types of Weibull plotting paper have scales that allow one to read the slope of the line directly, rather than having to calculate it based on "rise over run." By drawing a line parallel to the best-fit model line through the slope scale, we can see that the estimate for for this data set is approximately 1.4.
