DIFFERENCE BETWEEN ACTUATOR AND SENSOR

Actuators are devices that work opposite to sensors. A sensor converts a physical event into an electrical signal, whereas an actuator converts electrical signal into a physical event. When sensors are used at input of a system, actuators are used to perform output function in a system as they control an external device.

[EPUB] Introduction To The Actuator Sensor Interface

Sensors and actuators are two critical components of every closed loop control system. Such a system is also called a mechatronics system. A typical me chatronics system as shown in Fig. 16.1 consists of a sensing unit, a controller, and an actuating unit. A sensing unit can be as simple as a single sensor or can consist
