**Fire on Earth**

**An Introduction** *John Wiley & Sons*

Earth is the only planet known to have fire. The reason is both simple and profound: fire exists because Earth is the only planet to possess life as we know it. Fire is an expression of life on Earth and an index of life's history. Few processes are as integral, unique, or ancient. Fire on Earth puts fire in its rightful place as an integral part of the study of geology, biology, human history, physics, and global chemistry. Fire is ubiquitous in various forms throughout Earth, and belongs as part of formal inquiries about our world. In recent years fire literature has multiplied exponentially; dedicated journals exist and half a dozen international conferences are held annually. A host of formal sciences, or programs announcing interdisciplinary

intentions, are willing to consider fire. Wildfire also appears routinely in media reporting. This full-colour text, containing over 250 illustrations of fire in all contexts, is designed to provide a synthesis of contemporary thinking; bringing together the most powerful concepts and disciplinary voices to examine, in an international setting, why planetary fire exists, how it works, and why it looks the way it does today. Students, lecturers, researchers and professionals interested in the physical, ecological and historical characteristics of fire will find this book, and accompanying web-based material, essential reading for undergraduate and postgraduate courses in all related disciplines, for general interest and for providing an interdisciplinary foundation for further study. A comprehensive approach to the history, behaviour and ecological effects of fire on earth. Timely introduction to this important subject, with relevance for global climate change, biodiversity loss and the evolution of human culture. Provides a foundation for the interdisciplinary field of Fire Research. Authored by an international team of leading experts in the field. Associated website provides additional resources.

### **Reaching Net Zero**

### **What It Takes to Solve the Global Climate Crisis** *Elsevier*

Reaching Net Zero: What It Takes to Solve the Global Climate

Crisis addresses the imminent need to fully understand the causes, effects, and evidence of global warming; due to the large amount of climate disinformation and complexity of much of the available valid science, this book addresses the science of global warming in a concise, readable manner while providing an in-depth reference for readers who want more details or to study the sources of information. This book also investigates potential practical next steps of interest to concerned scientists, engineers, and citizens, with an aim to further discuss and achieve the eventual Intergovernmental Panel on Climate Change (IPCC) 'Net Zero' goals. Solving the problem of reaching net zero requires educating others to support the changes that must occur and to provide the possible solutions required. This is a necessary read for academics in climate and environmental science, and specialists such as those in earth science or environmental studies, covering the science, technology, economics, politics, international, and other issues involved in doing something about global warming. It is also important for those interested in global warming and anyone involved in decision-making processes and legislation that deal with reduction in carbon footprints. Provides in-depth discussion of understanding the problem of global warming, with clear explanations of the science behind global warming and climate change. Features case studies of successes and failures in reducing carbon footprints, with advised potential solutions for reaching net zero. Takes a realistic approach to the problems and solutions of global warming in light of all available evidence across multiple disciplines.

### **Data Analysis Methods in Physical Oceanography**

**Second and Revised Edition Elsevier**

Data Analysis Methods in Physical Oceanography is a practical reference guide to established and modern data analysis techniques in earth and ocean sciences. This second and revised edition is even more comprehensive with numerous updates, and an additional appendix on 'Convolution and Fourier transforms'. Intended for both students and established scientists, the five major chapters of the book cover data acquisition and recording, data processing and presentation, statistical methods and error handling, analysis of spatial data fields, and time series analysis methods. Chapter 5 on time series analysis is a book in itself, spanning a wide diversity of topics from stochastic processes and stationarity, coherence functions, Fourier analysis, tidal harmonic analysis, spectral and cross-spectral analysis, wavelet and other related methods for processing nonstationary data series, digital filters, and fractals. The seven appendices include unit conversions, approximation methods and nondimensional numbers used in geophysical fluid dynamics, presentations on convolution, statistical terminology, and distribution functions, and a number of important statistical tables. Twenty pages are devoted to references. Featuring:

- An in-depth presentation of modern techniques for the analysis of temporal and spatial data sets collected in oceanography, geophysics, and other disciplines in earth and ocean sciences.
- A detailed overview of oceanographic instrumentation and sensors - old and new - used to collect oceanographic data.
- 7 appendices especially applicable to earth and ocean sciences ranging from conversion of units, through statistical tables, to terminology and non-dimensional parameters.

In praise of the first edition: "(...)This is

a very practical guide to the various statistical analysis methods used for obtaining information from geophysical data, with particular reference to oceanography(...). The book provides both a text for advanced students of the geophysical sciences and a useful reference volume for researchers." *Aslib Book Guide Vol 63, No. 9, 1998* "(...)This is an excellent book that I recommend highly and will definitely use for my own research and teaching." *EOS Transactions, D.A.
