Solving Exponential Growth Problems

Exponential functions tell the stories of explosive change. The two types of exponential functions are exponential growth and exponential decay. Four variables — percent change, time, the amount at the beginning of the time period, and the amount at the end of the time period — play roles in exponential functions. This article focuses on how to use word problems to find the amount at the ...

Problem 1: A colony of bacteria doubles its population every 4 hours. If the colony originally has ten bacteria, how large will the colony be 24 hours later? Solution: Since the colony has an original population of 10, then $A=10$. Knowing that the population will be 20 four hours later, we can solve for the growth constant. $N(t) = A e^{(kt)}$ $20 = 10 e^{(k \cdot 4 \text{ hours})}$ $\ln(2) = (4 \text{ hours}) \cdot k$; $k = 0.173 / \text{hours}$
