9781461268161 - Biomaterials Science and Biocompatibility

Biocompatibility is the ability of an implant material to function in vivo without eliciting detrimental local or systemic responses in the body. 8 Prior to their use in human fracture fixation, biomaterials undergo tissue and animal testing to determine their safety and efficacy. Biomaterials that elicit little or no host response such as cobalt-chromium metallic alloys can be thought of as inert materials.

Biocompatibility - an overview | ScienceDirect Topics

There are many definitions of biomaterials and biocompatibility but the one given by Williams remains widely accepted in science and medicine: a biomaterial is ‘any substance (other than a drug) or combination of substances synthetic or natural in origin, which can be used for any period of time, as a whole or part of a system which treats, augments, or replaces tissue, organ, or function of the body’ (Williams 1987). Historically biomaterials have been classed as biocompatible on the ...

As the science and engineering of biomaterials continues to expand with increased emphasis on the development of nanomaterials and tissue engineering scaffolds, emphasis also must be placed on appropriate and adequate approaches to the in vivo and in vitro evaluation of biomaterial biocompatibility/biological response evaluation. This article presents six topic areas that should be addressed by investigators as they move forward in the development of new systems for regenerative medicine.
