Use of the Guide to Physical Therapist Practice in Current Clinical Practice by Recent Graduates

Abstract: **PURPOSE:** The purpose of our study was to describe the use of the Guide to Physical Therapist Practice (Guide) in multiple clinical settings by recent graduates whose entry-level coursework had incorporated the Guide. **SUBJECTS:** One hundred twenty-seven entry-level physical therapy (PT) graduates from class years between 1999 and 2003 voluntarily participated in the study. Five subjects were excluded from the analysis secondary to not currently working as a physical therapist. **METHODS:** The researchers developed an 18 question Likert-style: survey that contained 5 parts: demographics, personal reference to the Guide, Guide terminology, person-first language, and a section dedicated to open comments on use of the Guide. A pilot survey and expert review were conducted for content validation. Experts included entry-level 2004 graduates and PT faculty members who have incorporated the Guide into their teaching methods. The researchers obtained a list of entry-level PT graduates between the years 1999-2003 from an institution from New England. Return envelopes were coded to track responses to facilitate a second mailing. Confidentiality was maintained for each respondent. **ANALYSES:** Descriptive and summary statistics were used to describe the constructs of the study. These constructs were based on use of the Guide in clinical settings, how the Guide was used in practice, when the Guide was referenced in clinical settings, and use of terminology from the Guide in clinical practice. The statistics generated from both demographics and construct summaries included: frequencies, cross tabulations, and a factorial ANOVA. **RESULTS:** Our sample population consisted of 100 females (78.7%) and 27 males (21.3%). There was an even distribution of respondents from all class years, and the 122 respondents spanned 20 of the 50 states. Predominant states include: Connecticut (21.5%), Massachusetts (20.7%), New York (15.7%), and New Jersey (7.4%). Length of PT practice ranged from 6 to 60 months, and the majority reported practicing full-time (97.5%) as well as in hospital (22.1 %) and outpatient clinics or offices (37.7%). Of the 122 respondents, 37.4% were American Physical Therapy Association (APTA) members. The Guide in any version was reported to be available in 48.8% of all clinical settings. The results from questions one through ten concerning personal use of the Guide had a 78% response rate of "never". The Guide was not used as a primary resource in clinical practice as reported by 89.3% of respondents. With further investigations with factorial ANOVA, the researchers identified that clinical use increased under certain demographic conditions. Demographic variables that were noteworthy in association to increased use of the Guide compared to their counterparts were: gender, current practice region, current clinical setting, APTA member, and availability of any version of the Guide in the clinical setting. A male APTA member from Connecticut currently practicing in outpatient orthopedics with aversion of the Guide available was more likely to report a greater use of the Guide. Use of Guide terminology and use of person-first language had an 87% or greater response of sometimes, always, or often. **CONCLUSION AND CLINICAL RELEVANCE:** Although the entry-level PT educational program incorporated the Guide in the curriculum, carryover of use into PT practice is not evident. Therefore a dichotomy exists between the educational preparation and clinical practice; the goals or purposes for the Guide may not be fully met as proposed.

The physical therapist examination, including history, systems review, and specific tests and measures for each case, as well as evaluation, diagnosis, prognosis, plan of care, and evidence-based interventions are also addressed. Sample Cases in Some of the Practice Patterns Include: -Primary Prevention/Risk Reduction for Integumentary Disorders: A patient

with multiple sclerosis; an octogenarian in skeletal traction; a patient with rheumatoid arthritis -Impaired Integumentary Integrity Associated With Superficial Skin Involvement: A patient burned from a splash injury; a patient with a CVA and a pressure area; a patient with a deep vein thrombosis, cellulitis and edema -Impaired Integumentary Integrity Associated With Partial-Thickness Skin Involvement and Scar Formation: A patient with a vascular ulcer; a patient with mixed vascular disease and pressure ulcer; a patient with a superficial partial-thickness burn -Impaired Integumentary Integrity Associated With Full-Thickness Skin Involvement and Scar Formation: A patient with a neuropathic wound; a patient with a full-thickness traumatic, arterial insufficient wound; a patient with a full-thickness infected wound -Impaired Integumentary Integrity Associated With Skin Involvement Extending Into Fascia, Muscle, Bone, and Scar Formation: A patient with infection in a post-traumatic wound extending to the bone; a patient pre-operative for free flap surgical coverage of a sacral pressure ulcer; a patient post free flap reconstruction of an electrical wound At long last, Dr. Marilyn Moffat and Katherine Biggs Harris have created a book that will integrate the parameters of the Guide, as it relates to the integumentary system, into the practice arena, that not only covers the material but also allows for a problem-solving approach to learning for educators and students.
