Geothermal gradient is the rate of increasing temperature with respect to increasing depth in Earth's interior. Away from tectonic plate boundaries, it is about 25–30 °C/km (72–87 °F/mi) of depth near the surface in most of the world. Strictly speaking, geothermal necessarily refers to Earth but the concept may be applied to other planets. ...

Geothermal gradient - Wikipedia

The geothermal energy of the Earth's crust originates from the original formation of the planet and from radioactive decay of materials (in currently uncertain but possibly roughly equal proportions). The adjective geothermal originates from the Greek roots γῆ (gê), meaning Earth, and θερμός (thermós),

meaning hot.
