### Principal Components Analysis For Dummies

Principal component analysis (PCA) is a valuable technique that is widely used in predictive analytics and data science. It studies a dataset to learn the most relevant variables responsible for the highest variation in that dataset. PCA is mostly used as a data reduction technique. While building predictive

models, you may need to reduce the number of features describing your dataset.

### Applying Principal Component Analysis to ... - dummies

Principal components are new variables that are constructed as linear combinations or mixtures of the initial variables. These combinations are done in such a way that the new variables (i.e., principal components) are uncorrelated and most of the information within the initial variables is squeezed or compressed into the first components.

### Principal Component Analysis 4 Dummies: Eigenvectors ...

Principal Component Analysis is a well-known dimension reduction technique. It transforms the variables into a new set of variables called as principal components. These principal

components are linear combination of original variables and are orthogonal. The first principal component accounts for most of the possible variation of original data. The second principal component does its best to capture the variance in the data.

Principal Components Analysis (PCA) is an algorithm to transform the columns of a dataset into a new set of features called Principal Components. By doing this, a large chunk of the information across the full dataset is effectively compressed in fewer feature columns.

### **Principal Component Analysis (PCA) - Better Explained | ML+**

Mathematically, the principal components are the eigenvectors of the covariance matrix of the original dataset. Because the covariance matrix is symmetric, the eigenvectors are orthogonal. The principal components (eigenvectors) correspond to the direction (in the original n-dimensional space) with the greatest variance in the data. Eigenvalues

Principal component analysis (PCA) is commonly thought of as a statistical technique for data reduction. It helps you reduce the number of variables in an analysis by describing a series of uncorrelated linear combinations of the variables that contain most of the variance. PCA originated with the work of Pearson (1901) and Hotelling (1933).
