About Phase Rule In Engineering

The phase rule is a general principle governing "pVT systems" in thermodynamic equilibrium, whose states are completely described by the variables pressure (p), volume (V) and temperature (T). If F is the number of degrees of freedom, C is the number of components and P is the number of phases, then. $F = C - P + 2$.

Phase rule - Wikipedia

The phase rule was given by Gibbs, which explains the equilibrium existing in heterogeneous systems. It states that the equilibrium between different phases is influenced by temperature, pressure and concentration only and not gravity, electrical or magnetic forces. The number of degrees of freedom (F), which will be explained later, is related to the number of components (C) and phases (P) by the following phase rule equation.

Phase Rule (Chapter 4) - Engineering Chemistry

This equation is called Gibbs phase rule and can be represented as follows $P + F = C + 2$ Where C is the number of components in a system, P is the number of phases which coexist in a chosen system and F is the degree of freedom.

An expression known as the Gibbs phase rule relates the number of independent components C x and number of phases P to the number of variables that can be changed independently. This number, known as the degrees of freedom f , is equal to the number of independent variables present in the system minus the number of equations of constraint between the variables.

Chapter Outline: Phase Diagrams

The phase rule, first devised by J Willard Gibbs, relates the number of degrees of freedom in a system, f , to the number of phases, p , and number of chemical components, c . Thus far, only single-component (i.e., pure, $c = 1$) systems have been considered, but many materials are composed of more than one component.

Phase Rule - an overview | ScienceDirect Topics

The phase rule, in the form to be derived, applies to a system that continues to have complete thermal, mechanical, and transfer equilibrium as intensive variables change. This means different phases are not separated by adiabatic or rigid partitions, or by semipermeable or impermeable membranes.

For a system at equilibrium the phase rule relates: P = number of phases that can coexist, to; C = number of components making up the phases, and; F = degrees of freedom.; Where these three variables are related in the equation $P + F = C + 2$; The degrees of freedom represent the environmental conditions which can be independantly varied without changing the number of phases in the system.

From Wikipedia, the free encyclopedia The lever rule is a rule used to determine the mole fraction (x_i) or the mass fraction (w_i) of each phase of a binary equilibrium phase diagram. It can be used to determine the fraction of liquid and solid phases for a given binary composition and temperature that is between the liquidus and solidus line.
