STATION 1 – Water is a polar molecule and has a very unique structure. A water molecule, because of its shape, is a polar molecule. That is, it has one side that is positively charged and one side that is negatively charged. The molecule is made up of two hydrogen atoms and one oxygen atom. The bonds between the atoms are called covalent bonds,

Properties of Water Rotation Lab

Since water has a high specific heat it also has a high heat of vaporization. In the specific heat example, which liquid has the highest specific heat? (Remember that the more heat it takes to make the liquid raise 1 degree in temperature, the higher the specific heat it has.)

Biology Notebook: 2.01 Properties of water Diagram | Quizlet

Water is called the “universal solvent” because it dissolves more substances than any other liquid. This means that wherever water goes, either through the ground or through our bodies, it

takes along valuable chemicals, minerals, and nutrients. Water, the liquid commonly used for cleaning, has a property called surface tension. In the body of the water, each molecule is surrounded and attracted by other water molecules.

Properties of Water - BIOLOGY JUNCTION

Some of the unique properties of water that allow life to exist are: It is less dense as a solid than as a liquid. It sticks to itself - cohesion- cohesion is also related to surface tension. It sticks to other polar or charged molecules -adhesion- adhesion results in phenomena such as capillary action.

Water can moderate temperature because of the two properties: high-specific heat and the high heat of vaporization. High-specific heat is the amount of energy that is absorbed or lost by one gram of a substance to change the temperature by 1 degree celsius. Water molecules form a lot of hydrogen bonds between one another.
