Design Specification. Design Specifications describe how a system performs the requirements outlined in the Functional Requirements. Depending on the system, this can include instructions on testing specific

requirements, configuration settings, or review of functions or code. All requirements outlined in the functional specification should be addressed; linking requirements between the functional requirements and design specification is performed via the Traceability Matrix.

Design Specifications (DS) | Ofni Systems

The System Design Document (SDD) describes how the functional and nonfunctional requirements recorded in the Requirements Document, the preliminary user-oriented functional design recorded in the High Level Technical Design Concept/Alternatives

document, and the preliminary data design documented in the Logical Data Model (LDM) transform into more technical system design specifications from which the system is built.
