We review some of the fundamental concepts which have been introduced into the field of amorphous semiconductors by Professor Sir Nevill Mott. These include the 8–N rule, variable range hopping, the Austin–Mott ac conductivity, the mobility edge, and the minimum metallic conductivity. We demonstrate that there are still severe problems, although there is no real alternative to Mott's concepts.

Fundamentals of amorphous semiconductors are reviewed starting with glass transition. Short-range and long-range order structure of typical chalcogenides are described. Concepts of negative correlation energy and valence alternation pairs are introduced. Anderson localisation and percolation in amorphous networks are discussed.

Our understanding of amorphous semiconductors has been greatly clarified by recent theoretical and experimental work. It is now evident that the electrical properties of these materials are generally controlled by intrinsic defects which are either thermodynamically required or induced via strains during the deposition process.

A semiconductor material has an electrical conductivity value falling between that of a conductor, such as metallic copper, and an insulator, such as glass. Its resistivity falls as its temperature rises; metals are the opposite. Its conducting properties may be altered in useful ways by introducing impurities into the crystal structure. When two differently-doped regions exist in the same crystal, a semiconductor junction is created. The behavior of charge carriers, which include electrons, ion

In this matter, we have recently proven the effectiveness of introducing band-fluctuations when describing the fundamental absorption of amorphous hydrogenated silicon carbide , nano-crystalline methylammonium lead iodide and formamidinium cesium lead mixed-halide perovskite semiconductors near the absorption band edge. Here, we develop the fundamental absorption model in detail, resulting in a merge of the Urbach and absorption edge regions in a single equation described as a consequence of ...
