Real Time Computer Vision

Computer vision is about extracting information from images or video, and the meaning of real time depends on the kind of information you are trying to extract. A typical video camera acquires images at 30 frames per second (fps). So that can be your definition of "real-time", i.e. being able to

process images at the rate at which you acquire them.

This course introduces students to key computer vision techniques for real-time applications. Students will learn to quickly build applications that enable computers to “see,” and make decisions based on still images or video streams. Through regular assignments and in class laboratory exercises (students are advised to bring their own laptop to class), students will build real-time systems for performing tasks including object recognition and face detection and recognition.
