internal corrosion control of water supply systems code of practice A fire sprinkler system is an active fire protection method, consisting of a water supply system, providing adequate pressure and flowrate to a water distribution piping system, onto which fire sprinklers are connected.

internal corrosion control of water supply systems code of ...

Internal corrosion refers to corrosion occurring on the inside of a pipeline. This type of corrosion

often results from the presence of molecules such as carbon dioxide (CO_2), hydrogen sulfide (H_2S), water, organic acids and other molecules. Typically, these molecules react with the internal pipe surface through anodic and cathodic reactions. The product of these reactions may deposit within the pipe, creating a protective layer that inhibits further corrosion.

What is Internal Corrosion? - Definition from Corrosionpedia

Corrosion control, scale control, and microbial control (or biofouling control) are the main performance parameters used to judge whether the application of a cooling water program is meeting the system needs. In addition, compliance of applicable regulations and discharge limits are also the required performance parameters. As in all engineering applications, a safety margin needs to be included in the selection and application of cooling water treatment chemicals and their use dosages.
