Fuzzy Relational Algebra For Possibility

We distinguish two types of fuzziness: one in an attribute value itself and the other in an association of them. For such fuzzy data, we propose a possibility-distribution-fuzzy-relational model, in which fuzzy data are represented by fuzzy relations whose grades of membership and attribute values are possibility distributions. In this model, the former fuzziness is represented by a possibility distribution and the latter by a grade of membership.

The fuzzy databases are extended from the classical databases based on fuzzy sets and possibility theory , and they can be resemblance-based fuzzy model [5, 6] and possibility-based fuzzy model [7, 8]. In the context of fuzzy databases, fuzzy functional dependency (FFD) has emerged to extend the classical functional dependency to represent functional relationships between classes/attributes of objects for fuzzy database models.
