Bio-Inspired Innovation and National Security

NDU Press

Despite the vital importance of the emerging area of biotechnology and its role in defense planning and policymaking, no definitive book has been written on the topic for the defense policymaker, the military student, and the private-sector bioscientist interested in the "emerging

opportunities market" of national security. This edited volume is intended to help close this gap and provide the necessary backdrop for thinking strategically about biology in defense planning and policymaking. This volume is about applications of the biological sciences, here called "biologically inspired innovations," to the military. Rather than treating biology as a series of threats to be dealt with, such innovations generally approach the biological sciences as a set of opportunities for the military to gain strategic advantage over adversaries. These opportunities range from looking at everything from genes to brains, from

enhancing human performance to creating renewable energy, from sensing the environment around us to harnessing its power.

Prealgebra

"Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the

cohesiveness and structure of mathematics.

Prealgebra follows a nontraditional approach in its presentation of content. The

beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough

understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.

Unholy Trinity
Marshall Cavendish International Asia Pte Ltd

New in this edition: REPENTANCE ON DEATH ROW. AN EXCLUSIVE INTERVIEW WITH SISTER GERARD, THE NUN WHO COUNSELLED THE TWO WOMEN ACCOMPLICES Singapore's most bizarre murder case drew to a close on 25

November 1988 when Adrian Lim, his wife Catherine Tan Mui Choo and mistress Hoe Kah Hong were hanged at Changi Prison. After two children were found dead within a fortnight in 1981, the Toa Payoh 'ritual killings' proved shocking for the revelations about self-styled spirit medium Adrian Lim's greed, depravity and cruelty. The confidence trickster persuaded numerous women that he possessed supernatural powers and they paid him with money, valuables and sex. He tortured his victims with primitive electric shock treatments that left one man dead. He was a monster who beat, slapped and kicked his women to make them fear and obey him as

he acted out his every lustful perversion. He turned his wife into a prostitute and stripper. He made his mistress lure the children to their deaths. Sentencing all three to hang, the trial judges said of Adrian Lim: "We are revulsed by his abominable and depraved conduct."

Math from Three to Seven

The Story of a Mathematical Circle for Preschoolers

American

Mathematical Soc.

This book is a captivating account of a professional mathematician's experiences

conducting a math circle for preschoolers in his apartment in Moscow in the 1980s.

As anyone who has taught or raised young children knows, mathematical

education for little kids is a real mystery. What

are they capable of?

What should they learn

first? How hard should

they work? Should they

even "work" at all?

Should we push them,

or just let them be?

There are no correct

answers to these

questions, and the

author deals with them

in classic math-circle

style: he doesn't ask

and then answer a

question, but shows us

a problem--be it

mathematical or

pedagogical--and

describes to us what

happened. His book is

a narrative about what

he did, what he tried,

what worked, what

failed, but most

important, what the

kids experienced. This

book does not purport

to show you how to

create precocious high

achievers. It is just one

person's story about

things he tried with a

half-dozen young

children.

Mathematicians,

psychologists,

educators, parents,

and everybody

interested in the

intellectual

development in young

children will find this

book to be an

invaluable, inspiring

resource. In the

interest of fostering a

greater awareness and

appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents and teachers, and the mathematics profession. Titles in this series are co-published with the Mathematical Sciences Research Institute (MSRI).

Superfood and Functional Food

An Overview of Their Processing and Utilization

BoD - Books on Demand

This book focuses on the usage and application of plant- and animal-based food products with significant functional properties and health benefits as well as their development into processed food. Many chapters in this book contain overviews on superfood and functional food from South America. Details on the functional properties of apiculture products are also included herein. Additionally, an area that is not widely discussed in academia - pet food with

functional properties - is also covered. It is hoped that this book will serve as a source of knowledge and information to make better choices in food consumption and alterations to dietary patterns. It is also recommended for readers to take a look at a related book, *Superfood and Functional Food - The Development of Superfoods and Their Roles as Medicine*.

Beginning and Intermediate

Algebra *Createspace Independent Publishing Platform*

Get Better Results with

high quality content, exercise sets, and step-by-step pedagogy! Tyler Wallace continues to offer an enlightened approach grounded in the fundamentals of classroom experience in *Beginning and Intermediate Algebra*. The text reflects the compassion and insight of its experienced author with features developed to address the specific needs of developmental level students. Throughout the text, the author communicates to students the very points their instructors are likely to make during lecture, and this helps to reinforce the concepts and provide instruction that leads students to mastery and success. The exercises, along with the number of practice

problems and group activities available, permit instructors to choose from a wealth of problems, allowing ample opportunity for students to practice what they learn in lecture to hone their skills. In this way, the book perfectly complements any learning platform, whether traditional lecture or distance-learning; its instruction is so reflective of what comes from lecture, that students will feel as comfortable outside of class as they do inside class with their instructor.
