Steam Engine Theory Of Operation
Reciprocating steam engines were used to

pump water out of flooded coal mines in the early 18th century. Our diagram shows steam pushing the piston one way and the momentum of the locomotive driving it the other way. This is called a single-acting steam engine and it's quite an inefficient design because the piston is being powered only half the time. A much better (though slightly more complex) design uses extra steam pipes and valves to make steam push the piston first one way and then the ...
